## DROPOUTS: 2010–11 and 2011–12

### Introduction

This report presents district and school dropout data for the 2010–11 and 2011–12 school years. Analyses address dropout status by grade level, race/ethnicity, gender, economic disadvantage, and English language proficiency.

### Background

San Diego Unified reports dropout data to the California Department of Education (CDE) through the annual data submission process. The CDE defines a dropout as any student in grades 7–12 who:

- left school before graduation or attainment of the legal equivalent (passed the General Educational Development [GED] examination or the California High School Proficiency Examination [CHSPE] or received an adult education diploma)<sup>1</sup> and
- did not return to a school or an educational program by the first Wednesday in October (i.e., Census Day) of the following school year.

Although this general definition has applied for many years, it is important to note that in recent years there have been significant changes in a) dropout working definitions, b) reporting methods, c) additional steps taken to follow up on dropouts, and d) the ability to search for students in the state’s database. These changes must be considered when reviewing recent dropout rates and rates over time.

**Working definition.** Beginning with 2002–03, the CDE changed the dropout working definition to align California’s definition with that of the National Center for Education Statistics (NCES). This resulted in a higher “new-rules” dropout rate than the rate derived using the old rules.

The changes included 1) modifying the dropout timeframe to the beginning and end of the regular school year (September to June for traditional schools and September to July for year-round schools) instead of from April to April, 2) designating all students who move out of the United States as non-dropouts, regardless of documentation of enrolling in school in another country, 3) designating as dropouts students who enroll in the High School Diploma Program (HSDP) but are not still enrolled on Census Day of the next school year (in the past, students who earned at least one credit through the HSDP during the dropout period were not considered dropouts), 4) designating students as dropouts if they enrolled in a community college and are not still enrolled on Census Day (prior to 2002–03, these students were not counted as dropouts), and 5) allowing

---

<sup>1</sup> The CDE identifies students who complete the GED as school completers, not graduates. Beginning in 2009–10, the CDE identifies students who pass the California High School Proficiency Exam (CHSPE) or an adult education diploma (such as the San Diego Unified/San Diego Community College Joint Diploma Program diploma) as graduates rather than completers. Grade 12 students who have received a Letter of Recognition are not counted as dropouts. See Administrative Procedure 4770 C.2 for the definitions of these documents.

severely disabled students to count as dropouts.

The “new-rules” grade 7–12 one-year dropout rate for 2002–03 was 3.5 percent (2,040 dropouts), about 25 percent higher than the “old-rules” rate of 2.8 percent (1,607 dropouts). The primary impact of the changes was on grade 9–12 dropout rates. The benefit of these changes is that district, California, and NCES reports of national dropout rates are comparable.

*State dropouts.* Starting in 2008–09, an additional rule was implemented, which rendered students as state dropouts only (not as dropouts for the individual school or school district) if they completed grades 6 or 8 but did not return to school in the following year. This change decreased the number of dropouts for the district and individual schools. It appears that the state reasoned that the receiving schools, which never see incoming students who do not show up, should not be responsible for them as dropouts. Therefore, there are decreases in the middle schools’ grade 7 and the high schools’ grade 9 dropout counts. Because of this new rule, the district’s 2008–09 grade 9 dropout count was cut by almost half from 136 to 72, resulting in a 50 percent rate decrease (from 1.2 to 0.6 percent). Including these students, the 2008–09 grade 9–12 one-year rate would have been 2.3 (rather than 2.1) percent – a difference of 6.9 percent – and the estimated four-year rate would have been 9.4 (rather than 8.9) percent – a difference of 5.4 percent.

*Cohort rate.* Beginning in 2009–10, the state developed a four-year adjusted cohort dropout rate. Instead of only using the students who drop out in one year to compute an estimated four-year dropout rate or to compute a one-year dropout rate, all students in a graduating-year cohort are used in the computation. A cohort includes all students who could potentially graduate during a four-year time period (grades 9–12), adding in students who transfer into the district and removing students who transfer out of the district or die during the four-year period.

For example, the class of 2012 students were in the 2011–12 cohort beginning when they were in grade 9 in 2008–09. They were removed from the cohort if they transferred to another district, and others were added as they transferred into the district as class of 2012 students. Students who dropped out between 2008–09 and 2011–12 remained in the cohort. Therefore, the cohort dropout rate is simply the number of students from the cohort who dropped out anytime during their four years of high school divided by the total number of students in the cohort after the four years are over.

**Reporting method.** In 2006–07, the CDE made a major change in the method of dropout reporting. Before 2006–07, the district annually reported aggregated dropout data for schools through a California Basic Education Data System (CBEDS) report uploaded to the CDE. Beginning with 2006–07, summary data were no longer submitted. Instead, dropouts for 2006–07 and 2007–08 were part of the annual submission of individual enrollment records to the California Student Information Service (CSIS) system, in which all California public schools’ student enrollments are reported. Starting in 2008–09, the system was transferred to the California Longitudinal Pupil Achievement Data System (CALPADS). These enrollment records show the beginning and end dates of the enrollments (among other data). When a student leaves the district, the enrollment record receives an exit code that indicates the nature of the exit, including codes that indicate whether the student has dropped out. After the records are submitted for a school year, the district’s dropout count may be reduced when it is discovered that a “dropout” has enrolled in another California public school during the year following the dropout period. The dropout count

may increase, however, if students thought to have transferred to another California public school do not show up at their expected destination.

**Following up on dropouts.** Secondary schools routinely document the school status of students who left during the dropout period. Documentation data were collected from schools via a customized data collection screen in the district’s student information system (SIS). Schools are asked to indicate where a student is currently enrolled or other whereabouts of the student for every student who leaves the district. School staff members may update this “exit screen” immediately upon a student’s exit from the district, allowing them to complete the information throughout the school year as students exit. Initial determinations of dropouts are made using these data. The Research and Reporting Department takes additional verification steps.

Since 2002–03, the initial set of grade 9–12 dropouts has been electronically matched with San Diego Community College adult education and regular program enrollments and with records of students who have received a GED through the adult education program. Beginning with the 2004–05 dropout reporting, the Research and Reporting Department has added two additional steps that were not taken in prior years. The first is to conduct a telephone survey regarding all students tagged as dropouts after schools had provided their documentation information to the Research and Reporting Department. The second step is to have the California Department of Education match the district’s potential dropouts against student enrollment data in the CSIS system. These additional steps reduced the district’s 2007–08 dropout count by several hundred students.

Starting in 2008–09, the second step of matching students using CSIS was no longer necessary since district staff members were now able to search for students one at a time on the online CALPADS database, which has since been utilized throughout the school year, not just once a year. More students were found to have re-enrolled in another California public school in the CALPADS database compared to CSIS because of this ability to search for students by name. The searches often resulted in finding a single student with more than one student state identifier (SSID). Therefore, when a student’s two SSIDs were merged, the complete enrollment history of the student showed that the student was not, in fact, a dropout. This reduced the dropout count for the district by dozens.

**Final lookup.** The district determined that a handful of students in 2010–11 and 2011–12 were not dropouts after the state finalized the numbers. These students re-enrolled in a San Diego Unified School District school or another California district school within the appropriate time period (i.e., on or before Census Day [October 5, 2011 and October 3, 2012, respectively]). Data were discovered via searches in the district’s local student information system and CALPADS. These students were not documented in time for state reporting, resulting in a difference between the numbers in this report and the CDE’s (see <http://dq.cde.ca.gov/dataquest>).

## 2010–11 and 2011–12 Dropout Rates

**Types of Dropout Rates.** Three types of dropout rates are used in this report to provide different perspectives on the student dropout issue:

- The **single-year rate** measures the proportion of students who drop out in a single year. This rate is computed by dividing the number of dropouts for a group by that group’s

Census Day enrollment and multiplying by 100. This rate is used most often in this report.

- The **estimated four-year rate** measures the dropout rate for a high school graduation class based on each grade’s dropout rate (grades 9–12) for the current year. This rate estimates the proportion of students in grade 9 that is expected to drop out over the course of four years of high school, presuming the underlying grade-specific dropout rates remain unchanged from the current year. The rate is derived by successively multiplying the “survival” rates  $((100 - \text{dropout rate})/100)$  for each grade to achieve a four-year survival rate, multiplying that figure by 100, and subtracting the result from 100.
- The **four-year adjusted cohort rate** includes all students who could potentially graduate during a four-year time period (grades 9–12), adding in students who transfer into the district and removing students who transfer out of the district or die during the four-year period. The rate is computed by simply dividing the number of students who dropped out from the cohort anytime during their four years of high school by the total number of students in the cohort after the four years are over.

Due to the rule changes, district dropout data for years prior to 2002–03 are not comparable to those for 2002–03 and later years. Therefore, the main focus of this report is on 2002–03 and after. However, to provide the reader some sense of district dropout rates over a longer period, some analyses include data for earlier years.

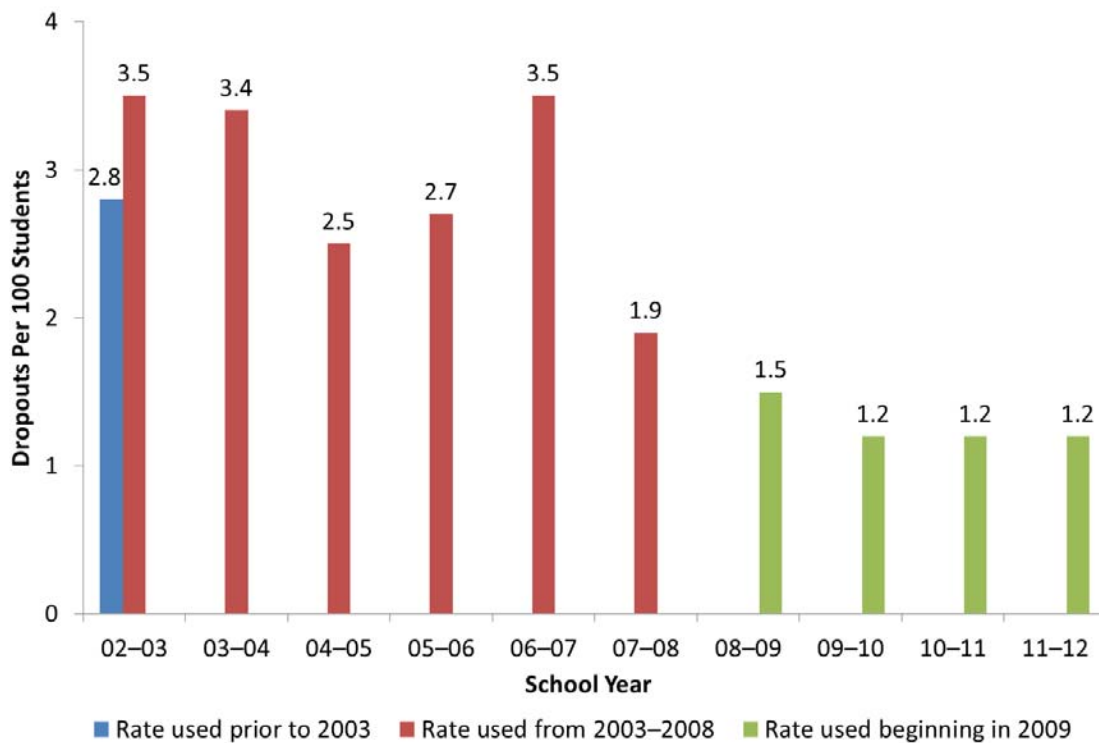

Figure 1. Grade 7–12 Single-Year Dropout Rates, 2002–03 to 2011–12

*District Grade 7–12 Single-Year Dropout Rates.* In 2011–12, 734 grade 7–12 students dropped out, about the same number as the prior two years (739 in 2009–10 and 754 in 2010–11). These

numbers include district charter schools. Figure 1 shows district grade 7–12 dropout rates for the past decade. The old- and new-rules rates for 2002–03 illustrate the effect of the rule changes that year. (The new-rules rate of 3.5 percent was about a quarter higher than the old-rules rate of 2.8.) In 2011–12, the district grade 7–12 dropout rate was, for the third year in a row, 1.2 dropouts per 100 enrolled students (see Appendix A for 2010–11 and Appendix B for 2011–12 district dropout data sheets).

Much of this sudden decrease in the dropout rate in 2007–08 and the continued decline thereafter may be due to dedicating more time and resources to tracking down potential dropouts. Through phone calls to students and emails to other California districts, a large number of potential dropouts were found to be enrolled in school. Many students otherwise would have counted as dropouts because the subsequent school district assigned a different SSID to the student, thus breaking the link from that student’s prior enrollment history. Through contact with family members, many others were found to be attending school out of state. This information was not recorded at their prior school, so these students would otherwise have been counted as dropouts. In addition, although many contacted students were still counted as dropouts, some were recovered and re-enrolled in the district to continue their high school education. Because of the large amount of time and effort that went into tracking down potential dropouts in the past five years, these rates are not fully comparable to those of prior years. And as previously noted, starting in 2008–09, students who dropped out between grades 6 and 7 and between grades 8 and 9 are no longer counted against the district, further reducing the dropout rate.

*Middle Level and High School Dropout Rates.* Middle level grade 7–8 dropout rates for the past 10 years are shown in Figure 2. The 2002–03 old-rules rate was higher than the new-rules rate. The grade 7–8 dropout rate was 0.1 percent for 2011–12, a rate that has remained constant for the past three years. Between 2007–08 and 2011–12, the number of grade 7 dropouts decreased by 94 percent (112 to 7), and the number of grade 8 dropouts decreased by 86 percent (132 to 18). As mentioned previously, these reductions in the number of dropouts are probably due to the district’s extensive efforts to track down stu-

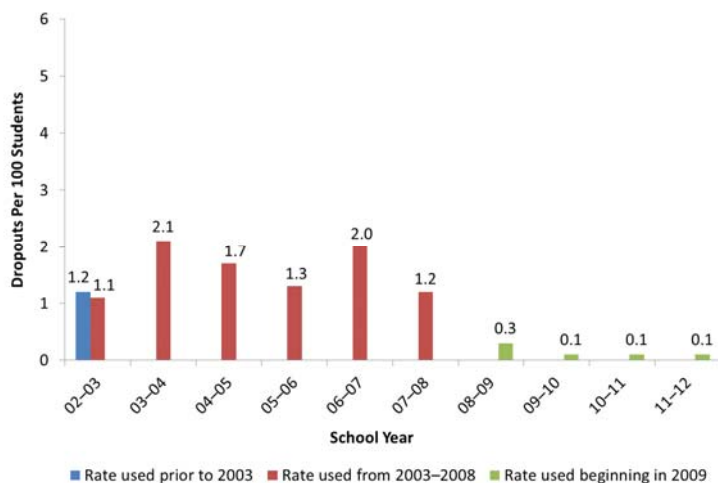

Figure 2. Grade 7–8 Single-Year Dropout Rates, 2002–03 to 2011–12

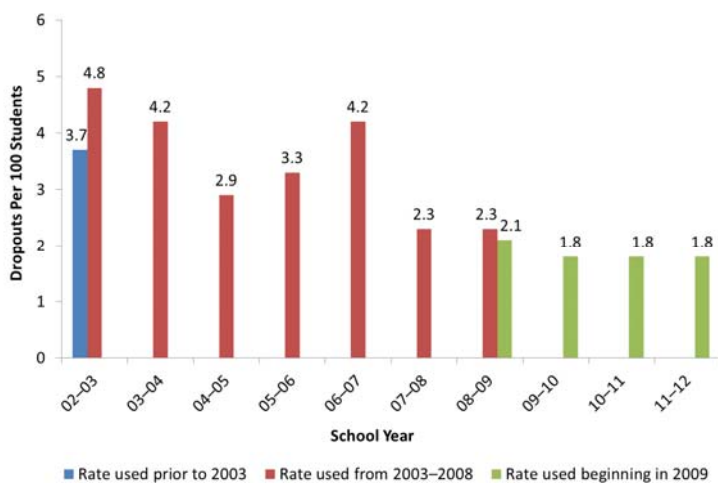

Figure 3. Grade 9–12 Single-Year Dropout Rates, 2002–03 to 2011–12

dents and the far greater ease in CALPADS of following up on students who leave the district. The grade 9–12 dropout rate was 1.8 percent in 2011–12 (see Figure 3), which again had not changed in three years and is the lowest rate since 1986–87 (the earliest year that dropout statistics have been reported).

In 2011–12, 709 grade 9–12 students dropped out, 3 percent fewer than in 2010–11, but not enough of a difference to affect the dropout rate. The proportion of 2011–12 dropouts by grade level is shown in Figure 4. The pattern of a higher proportion of dropouts in grade 12 in 2011–12 matches that of the six prior years. The largest difference in number of dropouts between 2010–11 and 2011–12 was in grade 9, where the number decreased by 29 percent (from 68 to 48). Grade 10 dropouts decreased by 4 percent (from 97 to 93). The changes in the number of dropouts in the other grade levels were not as great: grade 12 dropouts declined by only 1 percent (427 to 424), and grade 11 dropouts increased by 1 percent (142 to 144).

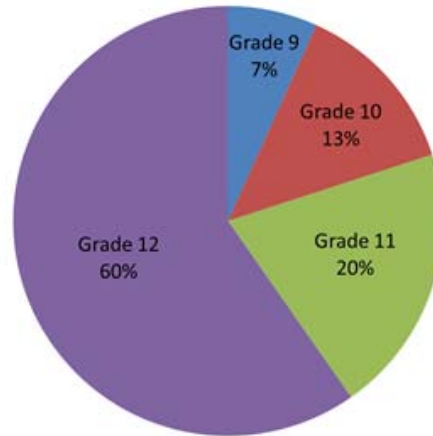

Figure 4. Proportion of Dropouts by Grade Level, 2011–12

*Estimated Four-Year Dropout Rate.* Another way to look at high school dropouts is the estimated four-year dropout rate, a surrogate for the “high school dropout rate.” Figure 5 shows the estimated four-year rates for the last decade. The current rate of 7.4 percent is just above the lowest rate in the past 23 years, two years prior in 2009–10. This rate means that an estimated 74 of eve-

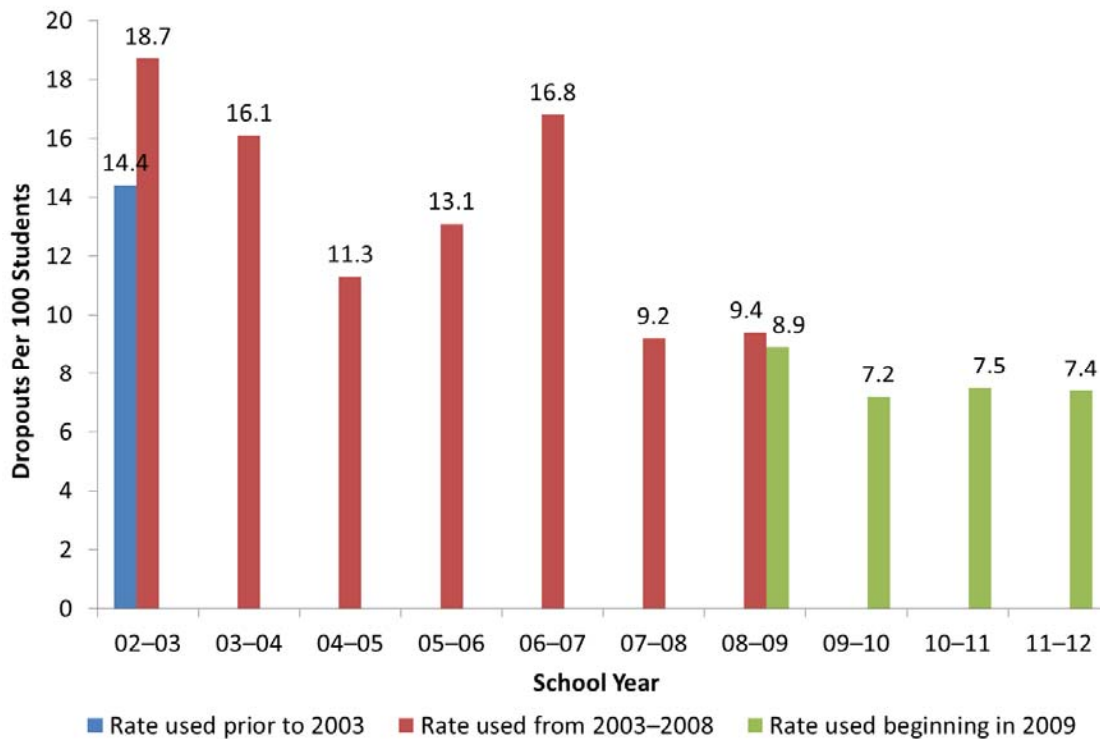

Figure 5. Grade 9-12 Estimated Four-Year Dropout Rates, 2002–03 to 2011–12

ry 1,000 district grade 9 students will drop out before graduation. Applying this estimate to 2011–12 grade 9 enrollments would result in about 826 students dropping out before completing high school in 2014–15.

*Adjusted Four-Year Cohort Rate.* As mentioned earlier, the state recently developed a cohort dropout rate, which includes the dropouts of all students in the same “class of” during their four years of high school. The state only includes district-managed schools in their computation (i.e., no charter schools). Therefore, Figure 6 shows a comparison of district-managed four-year rates—estimated and adjusted cohort—for the past three years. While the estimated rate hovered between 7.4 and 7.1 during this time period, the cohort rate dropped from 8.3 to the low 6s. The higher cohort rate in 2009–10 may be partly due to data in the four years prior not being completely “clean.” That is, submitting data to CALPADS was relatively new during that time period, and the reports that CALPADS offered to help districts fix data were not fully developed. Therefore, the district ended up with some students being reported as dropouts when they, in fact, were not. These data were later corrected but after the state’s reporting deadline.

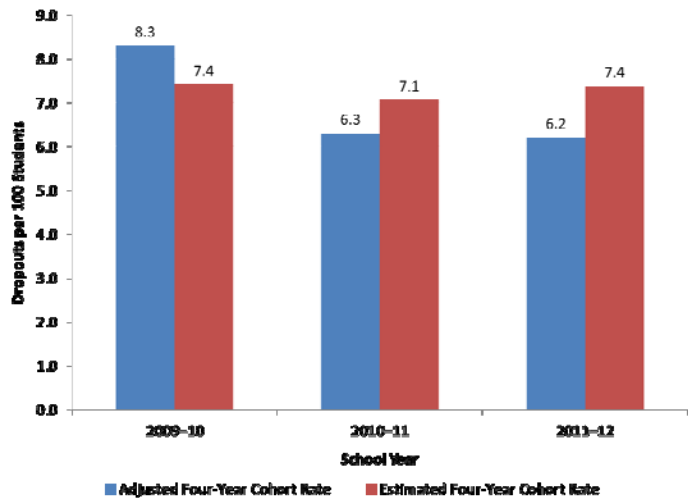

Figure 6. District-Managed Four-Year Estimated and Adjusted Cohort Dropout Rates, 2009–10 to 2011–12

**Student Group Analyses.** Dropout rates vary among student groups. The following section explores dropout rates for specific groups of students in the district.

*Grade Level.* Grades 7–10 and grades 11–12 have shown different patterns of dropout rates (see Figure 7). Grade 7–10 dropout rates decreased in 2008–09 followed by three years of relatively steady rates just at or below 2008–09 rates. Rates for grades 11–12 increased slightly in 2008–09

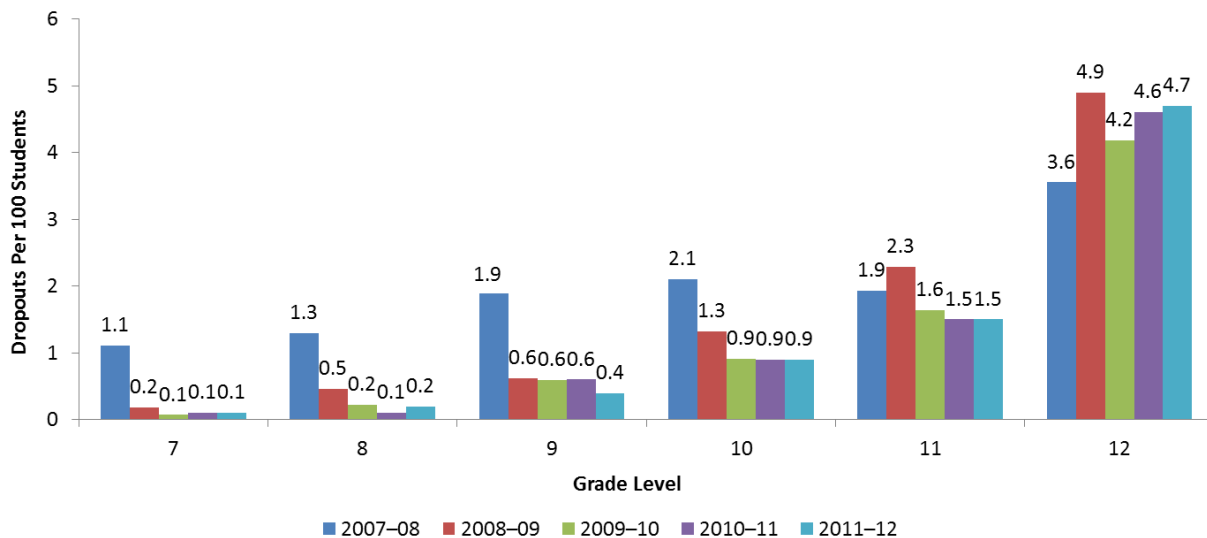

Figure 7. Single-Year Dropout Rates by Grade Level, 2007–08 to 2011–12

and then decreased in 2009–10. While the rates for grade 11 stayed just under those in 2009–10 for the next two years, the rates for grade 12 increased slightly in 2010–11 and 2011–12. The higher overall rates for grade 12 in general and associated increasing dropout rates in the past two years (while rates for other grade levels have remained the same or dropped slightly) indicate that dropout prevention efforts need to be focused on this grade level even before students enter their last year of high school, when it might be too late to graduate on time due to a lack of credits and/or too low a grade-point average (GPA).

*Race/Ethnicity.* Although the overall grade 7–12 dropout rate remained steady in 2011–12, the various racial/ethnic groups varied in their behavior (see Figure 8). The multiracial<sup>2</sup> student rate decreased the most (by 27 percent), followed by the rates for White students (by 5 percent) and Hispanic students (by 3 percent). Although their counts were relatively low both years, groups with rate increases in 2011–12 showed substantial differences since 2010–11: 90 percent higher for Asian students (from 0.6 to 1.1), 57 percent higher for Filipino students (from 0.4 to 0.7), and 30 percent higher for Indochinese students (from 0.5 to 0.7).

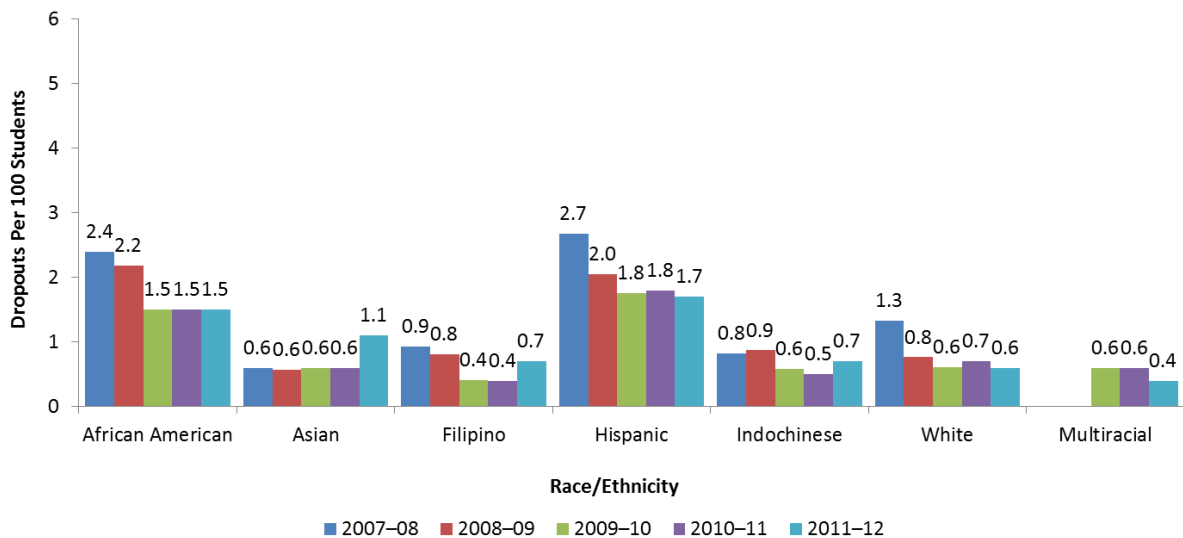

Figure 8. Grade 7–12 Single-Year Dropout Rates by Race/Ethnicity, 2007–08 to 2011–12

In grades 7–8, the only student group that showed a rate decrease in 2011–12 was White students (from 0.1 to 0.0; see Figure 9). Asian and Indochinese student rates remained at 0.0 from the prior year. The rates for the rest of the racial/ethnic groups increased: those for African American, Hispanic, and multiracial students each doubled from 0.1 to 0.2, and the rate for Filipino students rose from 0.0 in 2010–11 to 0.2 in 2011–12.

<sup>2</sup> Starting in 2009–10, in compliance with new federal guidelines, the district added a new racial category for students considered multiracial. Students are multiracial when they (or their parent/guardian) choose more than one race on their enrollment forms. For example, a student may choose both “White” and “Indochinese” and thus be considered multiracial. However, if “Hispanic” is selected, then the student is considered Hispanic no matter what other group is also selected. Students already enrolled in the district prior to 2009–10 were given the opportunity to change their racial category. Comparisons of racial-ethnic data with years prior to 2009–10 should take these changes into account.

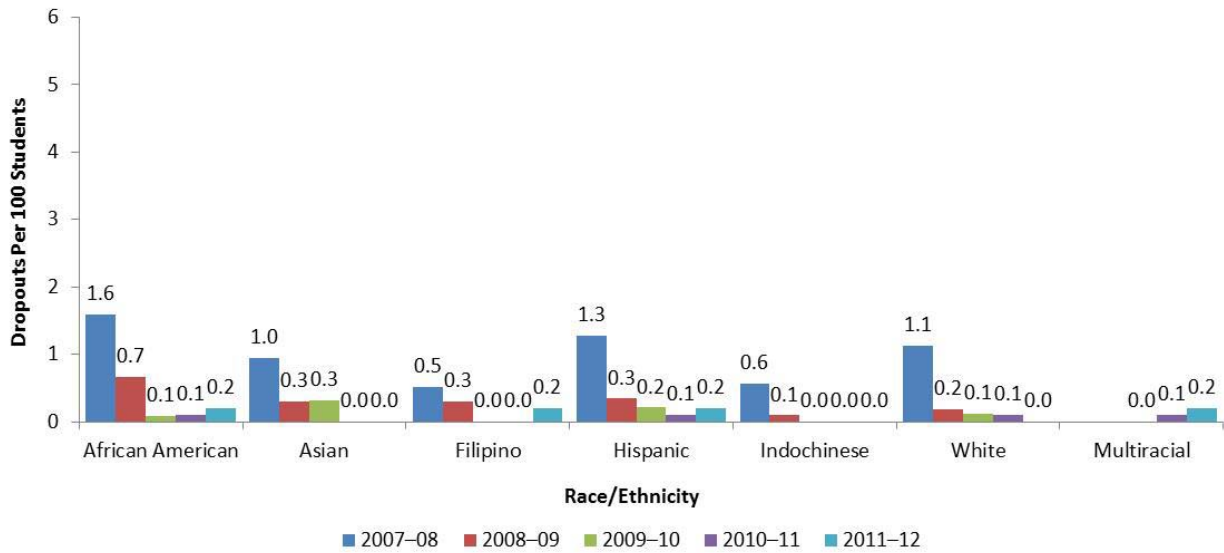

Figure 9. Grade 7–8 Single-Year Dropout Rates by Race/Ethnicity, 2007–08 to 2011–12

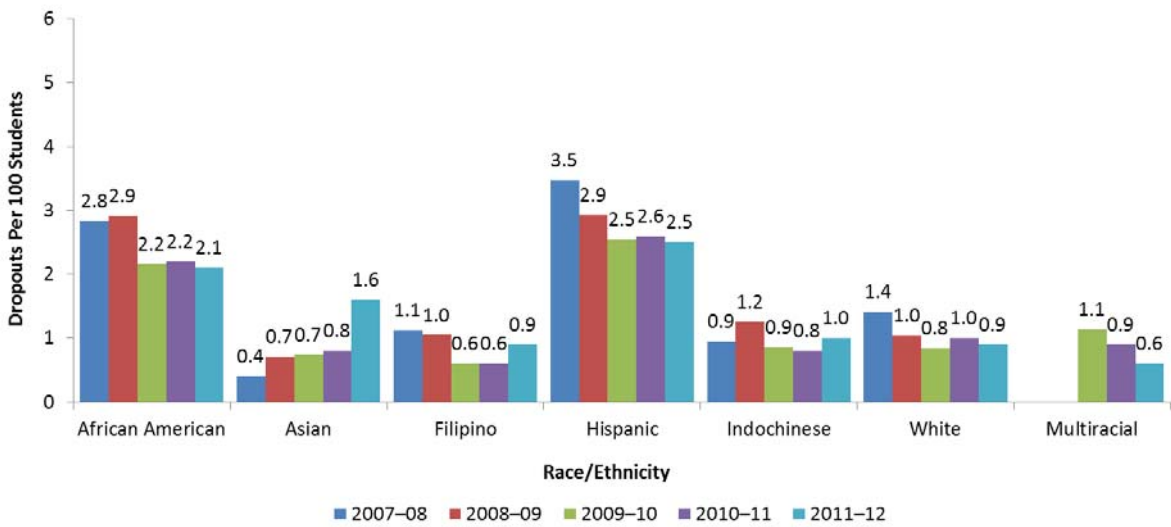

Figure 10. Grade 9–12 Single-Year Dropout Rates by Race/Ethnicity, 2007–08 to 2011–12

There were also rate differences between racial/ethnic groups for grades 9–12 in 2011–12 (see Figure 10). White students again showed a small drop (from 1.0 to 0.9), along with multiracial (from 0.9 to 0.6), African American (from 2.2 to 2.1), and Hispanic (from 2.6 to 2.5) students. The rates increased for the remaining racial/ethnic groups, with an 87 percent increase for Asian students (from 0.8 to 1.6), a 45 percent increase for Filipino students (from 0.6 to 0.9), and a 29 percent increase for Indochinese students (from 0.8 to 1.0).

Grade 12 racial/ethnic dropout rates are of particular interest because of the large proportion of students who drop out in grade 12. Figure 11 shows a pattern for grade 12 similar to that for grades 9–12, which is not surprising given the large share of grade 9–12 dropouts in grade 12. The only break in the pattern is for White students, who showed an 18 percent increase from 2010–11 to 2011–12 in grade 12, when they had a decrease in the overall grade 9–12 rate. The other student groups that also showed increases were Asian (by 84 percent), Indochinese (by 41 percent), and Filipino (by 11 percent). The student groups with drops in their dropout rates were multiracial (by 22 percent), African American (by 4 percent), and Hispanic (by 4 percent) students.

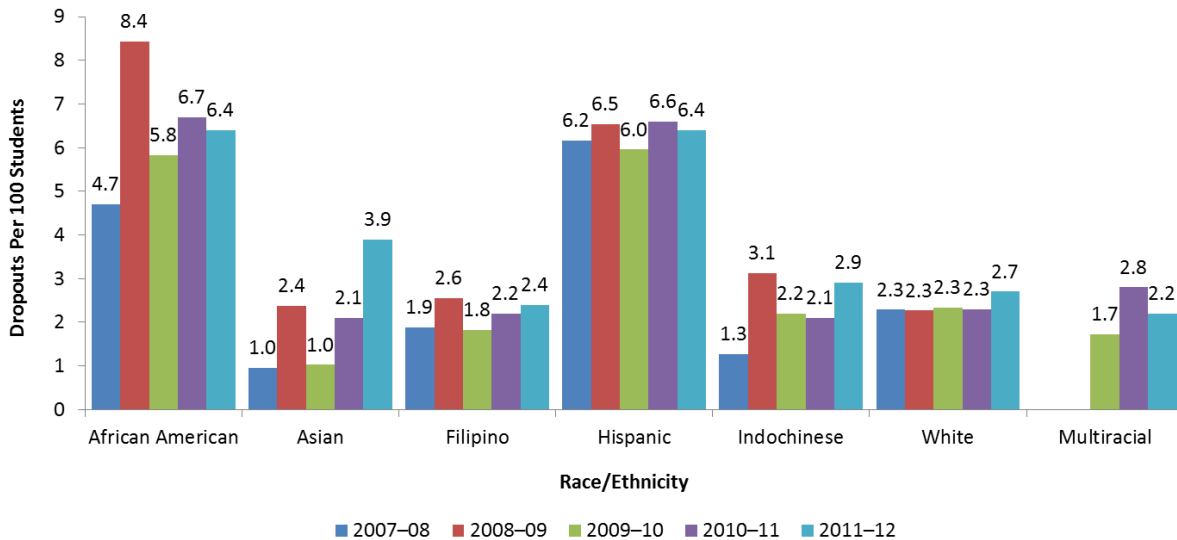

Figure 11. Grade 12 Single-Year Dropout Rates by Race/Ethnicity, 2007–08 to 2011–12

*Gender.* Traditionally, grade 7–12 male students are at greater risk of dropping out than female students (Figure 12). However, in 2007–08—apparently an anomalous year—the gap between the two groups closed to a difference of only 0.1. Male and female dropout rates, after little or no change from 2002–03 to 2003–04, decreased sharply in 2004–05 and 2005–06. In 2006–07, the rates for both genders increased to levels close to those in 2003–04. Then, the rates for both dropped in each of the following three years and have since remained steady at 1.5 for males and 1.0 for females, their lowest levels in 10 years.

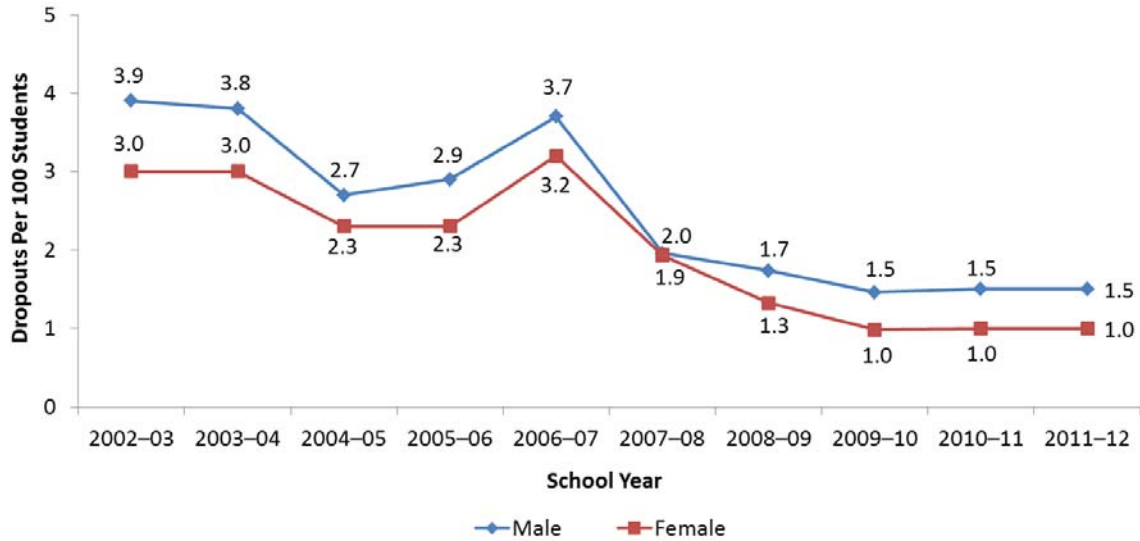

Figure 12. Grade 7–12 Single-Year Dropout Rates by Gender, 2002–03 to 2011–12

Figure 13 shows that male and female dropout rates varied by grade level in 2011–12. Grade 8 was the only grade level for which male students had the same rate as female students; for every other grade level, the male rates were higher than the female rate. In grade 11, the male rate was twice that for females (2.0 versus 1.0, respectively).

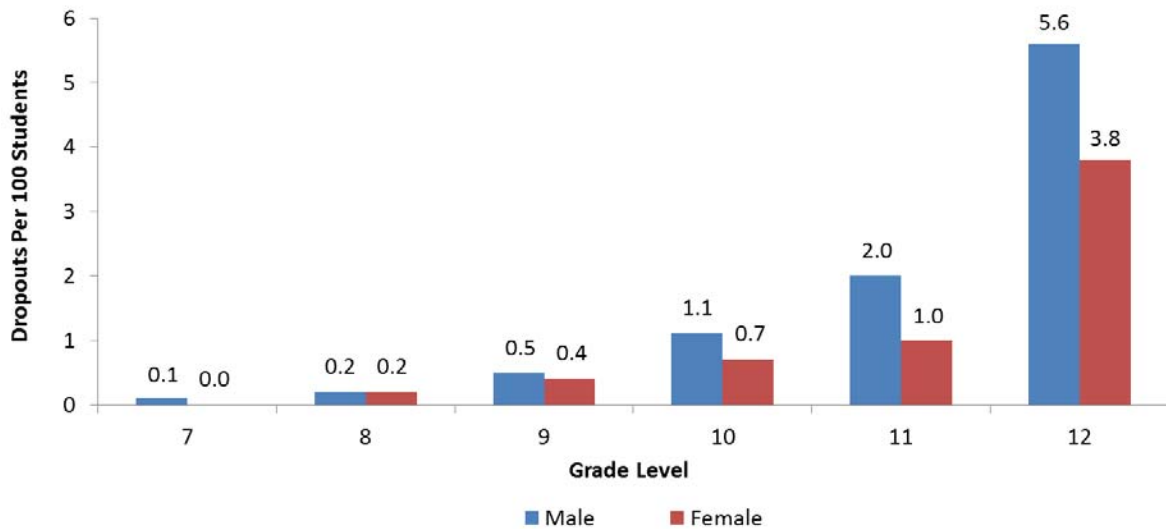

Figure 13. Single-Year Dropout Rates by Gender and Grade Level, 2011–12

*Economically Disadvantaged.* For this analysis, students certified eligible for free or reduced-price meals are identified as economically disadvantaged.<sup>3</sup> In 2011–12, the grade 7–12 dropout rate was over eight times higher for economically disadvantaged (ED) than non-ED students.

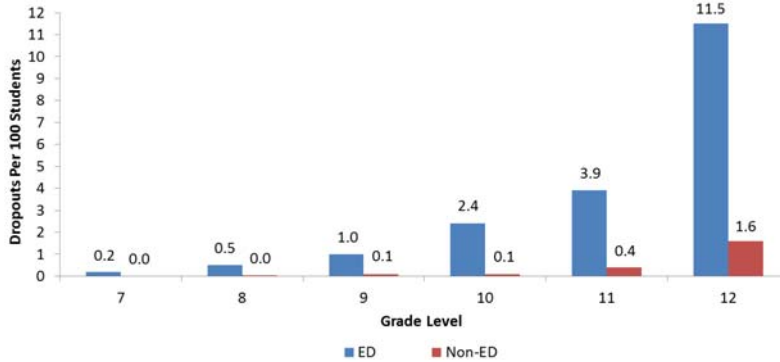

Figure 14. Single-Year Dropout Rates by ED Status and Grade Level, 2011–12

Grade-level differences in dropout rates for ED and non-ED students are shown in Figure 14. The dropout rates for ED students exceeded those for non-ED students in all grade levels. Proportionally, the largest grade-level difference was in grade 10, where the ED rate was about 23 times the non-ED rate. The narrowest gap was in grade 12, for which the ED rate was seven times the non-ED rate.

#### *English Language Proficiency.*

The 2011–12 English learner (EL)<sup>4</sup> student dropout rate was 3.3 percent, up from 3.0 percent the year prior. The non-EL student rate was 0.8 percent, just under the rate of 0.9 percent in 2010–11. Figure 15 shows that the EL dropout rate (3.3 percent) was over three-and-a-half times that for English-only and initially fluent students (0.9 percent each) and almost four-and-a-half times higher than that for students reclassified as English proficient (0.7 percent). EL students who clear the hurdle of reclassification are not as likely to drop out as EL students who have not demonstrated that level of English proficiency.

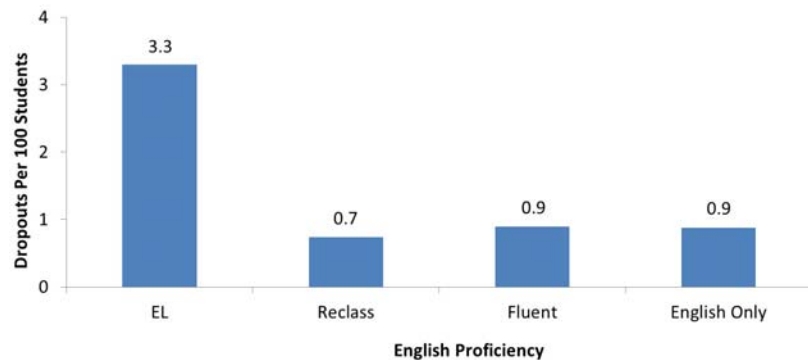

Figure 15. Single-Year Dropout Rates by English Language Proficiency, 2011–12

<sup>3</sup> Meal-eligibility data for charter school students were omitted from updates in the district's student information system between 2005–06 and 2011–12. For most charter schools using district food services, this resulted in undercounts of economically disadvantaged students; however, at the same time, some students may have been misidentified as eligible even though they no longer met the requirements. Although the general findings of analyses of economically disadvantaged rates are correct, their precision leaves much to be desired.

<sup>4</sup> Any student who lives in a home where a language other than English is spoken must take the California English Language Development Test (CELDT) within 30 days of his/her first date of enrollment in school to determine whether the student is fluent English proficient or an English learner. The CELDT is then administered each year to English learners until they are reclassified as fluent English proficient.

*Students with Disabilities.* Consistent with most prior years, the grade 7–12 dropout rate for students with disabilities (SWD)<sup>5</sup> in 2011–12 (2.8 percent) was higher than the rate for students in general education (1.0 percent). Figure 16 shows that SWD dropout rates were higher than those for students in general education in all grade levels except grade 8, where they were about the same (0.2 percent). The rate for grade 12 students in general education (3.9 percent) was about 57 percent lower than that for grade 12 students with disabilities (9.0 percent).

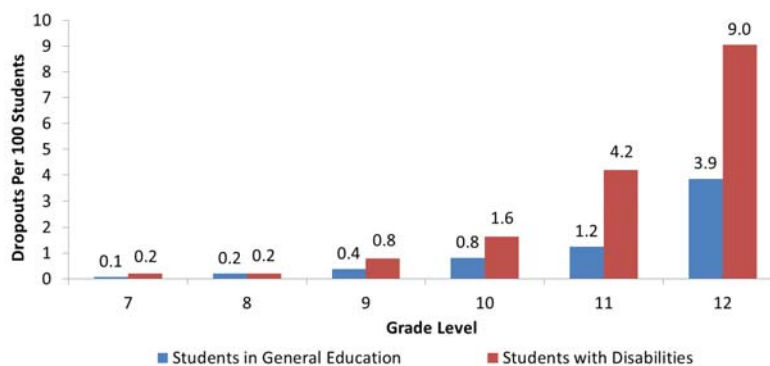

Figure 16. Single-Year Dropout Rates by Students with Disabilities Status and Grade Level, 2011–12

**Dropout Indicators.** *Attendance.* Teachers, counselors, principals, superintendents, researchers, and many others in the education field are interested in tracking possible indicators of dropping out to be able to intervene and prevent students from leaving school or to coax them back to school if they already left. One fairly obvious indicator could be attendance, and the current data support this. The average percentage of days present for students who dropped out in 2011–12 (not including charter schools that do not use the district’s student information system) was 81.9 percent, which was much lower than that for all grade 7–12 students at schools that use the district’s student information system (94.1 percent). For the year prior to dropping out, these students’ average attendance was slightly higher at 88.2 percent, but it was still lower than the percentage for all students in grades 7–12 (93.8 percent). It is reasonable to find that students who are on the verge of dropping out of school are absent more than other students. These increasing absences could be signs of disinterest in school, problems with getting to school, and/or personal issues that keep students away from school, resulting in a greater likelihood of leaving school altogether.

*Suspensions.* Another possible indicator of dropping out could be whether or not a student misbehaved and was subsequently suspended from school. The suspension rate for students who dropped out in 2011–12 was 6.9 suspensions per 100 students. However, the overall suspension rate for the district that year was slightly higher, at 7.9. One possible reason for the lower rate for dropouts could be that students who drop out from school have fewer days in school to get suspended. This is especially true for students who completed the 2010–11 school year and did not enroll in school in 2011–12; they are 2011–12 dropouts who never had an opportunity to get suspended during school that year. Looking at the year *before* dropping out, the dropout suspension rate was 16.1, much higher than the overall rate for either 2010–11 (9.6) or 2011–12, supporting the theory that misbehavior and subsequent suspensions could be indicators of dropping out.

*Test Scores.* Lower scores on the California Standards Test (CST), an assessment of students’ performance on California’s content standards, is another possible dropout predictor. Overall, students who dropped out in 2011–12 generally performed lower than the district as a whole in

<sup>5</sup> Students with disabilities (SWD) are those with Individual Education Programs (IEPs).

both English language arts (ELA) and mathematics in the three years prior to dropping out. (There were not enough dropouts taking the CST during the 2011–12 school year to make a valid comparison.) At each grade level between grades 6 and 11, dropouts scored between half a performance level lower (grade 9 math in 2011) to more than one-and-a-half performance levels lower (grade 6 math in 2009) than all district students in both ELA and math. The one exception was in grade 7 in 2011 where both dropouts and all district students performed the same, on average, in math. Struggling students may not feel as connected to school and may lose interest over time due to not understanding the material and not performing to the level of their peers. These students may then come to the conclusion that dropping out of school makes sense since they believe that they are unlikely to graduate anyway or because their lack of success makes school less enjoyable.

**School Analyses.** Individual school dropout figures are grouped into middle level, senior high, and alternative schools. Schools with an atypical grade configuration have grade 7 and 8 figures reported with middle level school data and grade 9–12 data among senior high school figures. Charter school data are also presented within their grade configuration groupings. School dropout data sheets are in Appendix C (2010–11) and Appendix D (2011–12).

*Middle Level.* The dropout rate for grade 7–8 middle level schools stayed at 0.1 percent between 2010–11 (15 dropouts) and 2011–12 (22 dropouts; see Table 1). Five middle schools had rate decreases between 2010–11 and 2011–12, but all decreases were small. The largest drop was seen at Mann, whose dropout counts fell by 100 percent, from three in 2010–11 to none in 2011–12. Six schools had rate increases, also by small amounts, with the largest increase for Knox, which went from no dropouts in 2010–11 to four dropouts in 2011–12.

*Senior High.* The grade 9–12 senior high school dropout rate decreased from 1.2 percent in 2010–11 to 1.1 percent in 2011–12, with the dropout count decreasing from 430 to 388, respectively (see Table 2). Twenty schools had dropout rate decreases, eighteen had rate increases, and seven had rates essentially unchanged from 2010–11. Three schools had substantial rate and count decreases: iHigh Virtual Academy, Learning Choice, and San Diego Communication. Lincoln’s dropout counts almost tripled, from 23 in 2010–11 to 66 in 2011–12.

*Alternative.* The dropout rate for alternative schools decreased slightly from 6.8 percent in 2010–11 to 6.6 percent in 2011–12 (see Table 3). The rates for six schools decreased and those for five schools increased. Three schools had substantial dropout rate decreases: Garfield, Non-Public Schools, and Twain. One school, TRACE/TRACE Seniors, had a substantial increase, from 98 dropouts in 2010–11 to 139 in 2011–12. Although TRACE/TRACE Seniors students are included in the dropout counts, their students are generally adult non-diploma bound SWD who had previously completed four years of high school. Nevertheless, the state includes these students in their dropout computations because the students left school before earning either a diploma or a letter of recognition.

*Charters.* Charter schools as a whole had a dropout rate slightly lower than that for district-managed schools (1.2 percent versus 1.3 percent, respectively). SWD were more likely to drop out at a district-managed school (3.0 percent) than at a charter school (1.2 percent), while students in general education at district-managed schools were slightly less likely to drop out (1.0 percent) than students in general education at charter schools (1.2 percent). Economically disadvantaged students at district-managed schools were over twice as likely to drop out as similar

students at charter schools (3.4 percent versus 1.6 percent). However, as previously mentioned, economically disadvantaged student data for charter schools may have been underreported for 2011–12, so comparisons of these students between charters and district-managed may not be appropriate.

Charter schools had proportionally slightly fewer dropouts than expected, comprising 16.1 percent of the dropouts while making up 17.0 percent of the student population. When disaggregated by grade level, the difference was greatest in grade 7, where 14.3 percent of the dropouts were charter students while 19.1 percent of the student population for that grade level were charter students.
