

Post-Secondary Enrollment Data on District Graduates
Based on Data from the National Student Clearinghouse, Graduation Years 2015 to 2019

NSC Data. Post-secondary (PS) institutions from across the country upload their enrollment records into the NSC database. Subscriber districts can submit their graduate data to the NSC and in return receive a file of PS enrollment records of any matching students found in the NSC database. The NSC uses name, gender, date of birth, date of graduation, and high school to match students. This report is based on NSC data received by the district through October 14, 2020.

Methodology. In this report, PS enrollment data of district graduates are aggregated in three ways. The first looks at PS enrollment records from the NSC in the month of October following high school graduation. The federal Bureau of Labor Statistics generates similar statistics enabling comparisons between national and district figures. The second tabulates NSC records one year after graduation, i.e., August 1 through July 31. The third tabulates all NSC records received to date. Data are aggregated by type of PS institution (2-year only, 4-year only, both), by high school, and by selected student group.
