

STUDENT SUSPENSIONS AND EXPULSIONS: 2012–13

Issue/Concern

Suspending and expelling a student from school are the two most severe outcomes that a student can receive as a consequence of disciplinary infractions. Reviewing patterns of suspension and expulsion is important to those interested in addressing behaviors that lead to such outcomes, inequities between groups of students, and lost student time in the classroom. The common observation that student discipline and behavior problems detract from classroom learning lends further importance to obtaining a better understanding of student behavior and school disciplinary practices. This report reviews out-of-school (regular) suspension, in-school suspension, and expulsion data for 2012–13.

Background

The district has monitored student suspensions for the last 31 years. In the late 1970s, the federal Office for Civil Rights (OCR) collected data on out-of-school suspensions of students in the San Diego Unified School District. Early in 1981, the OCR found patterns of "disciplinary sanctions imposed on students in a manner which discriminates against minority children." In fact, a comprehensive districtwide report analyzing suspension data for the years 1984–85 through 1990–91 found increasing suspension rates and widening racial/ethnic disparities in suspension. Subsequent reports covering the years 1991–92 through 1994–95 revealed minor dips in suspension rates but no significant change in racial/ethnic patterns.

In September 1992, the superintendent charged a Task Force on Student Suspensions with making recommendations to reduce suspensions and the overrepresentation of specific groups. The Task Force reported to the Board of Education in September 1993 with recommendations for

Suspension: The temporary removal of a student from ongoing instruction at the school site for purposes of adjustment and calling attention to the seriousness of his/her behavior. Students are not allowed on campus during the period of suspension except for official meetings related to their suspension.

² In-school suspension: A student is sent to a particular area at the school where he/she is monitored by school staff. An in-school suspension does not go on the student's permanent record, but it may be retained in the student's general file for reference and may be used as an alternative consequence before rising to the level of a formal suspension

³ Expulsion: The removal of a student from the immediate supervision and control, or general supervision, of school personnel. Expelled students may not participate in any district program or activity, including any independent study program.

Bell, Peter D. Student Suspensions: 1984–85 through 1990–91, Planning and Research Department, San Diego City Schools, April 21, 1992. Pre-1984–85 data are based on two earlier studies: Knowles, Gary W. and Ottinger, Ronald L. Report on 1984–85 Student Suspensions, Research Department, San Diego City Schools, May 27, 1986, and Knowles, Gary W. and Nafziger, Dean. Review of Secondary School Student Suspensions, 1981–82 through 1983–84, Research Department, San Diego City Schools, October 1984.

consistent discipline at schools, better referral and suspension data, and more knowledge about the usefulness of certain disciplinary measures, such as in-school suspensions.⁶ The Research and Reporting Department has continued to monitor suspensions in subsequent reports.⁷

Methodology

This study uses student suspension data on the district's student database; these coded summaries of incidents of out-of-school suspensions are entered by school site staff throughout the year. Each year, the Research and Reporting Department downloads these data, checks the data for various errors, researches and corrects possible errors, and tabulates and analyzes the corrected data.

Beginning in 2005–06, suspension data were retrieved from Zangle, a transactional information system for student information in place at all district schools by that school year. Due to inconsistencies in school site entry of suspension data using this program, clean-up of these data has been lengthy, resulting in delays in reporting districtwide and individual school suspension information since. In addition, 2012–13 expulsion data were collected directly from the Placement and Appeals Department, which maintains expulsion data for the district. All data analyses for 1987–88 through 2012–13 are based on corrected data.

Until 2011–12, in-school suspensions were determined using attendance data; it was felt that this would show the most accurate counts since there was no in-school suspension clean-up in Zangle's behavior data. Starting in 2011–12, the district counted in-school suspensions using the district's Zangle behavior data, as it does for suspensions, rather than using attendance records. This change was due to new state reporting requirements that included reporting in-school suspensions on an individual basis rather than in aggregate. It was also hoped this new method would result in more accurate counting, since the in-school suspension records were cleaned — along with the out-of-school suspensions — using attendance data simply as verification that

these consequences actually occurred and were recorded properly. Therefore, caution should be used when comparing 2011–12 and 2012–13 in-school suspension rates to those in prior years.

The following measures are used in this report:

- Rate: For out-of-school suspensions, the rate is the number of *suspensions* per 100 students. For in-school suspensions, the rate is the number of *days* of in-school suspensions per 100 students. For expulsions, the rate is the number of *expulsions* per 100 students.
- <u>Percentage of students suspended</u>: This is the number of students who received at least one suspension divided by the total number of students enrolled.

Limitations. This report only analyzes suspension, in-school suspension, and expulsion data. It does not claim to measure actual levels of misbehavior, particularly for minor offenses. Nor does it include data on the staff members who make disciplinary decisions, the climate in which decisions are made, or individual school policies. Furthermore, no data for referrals to administrators were analyzed. The analysis is limited to incidents that were entered correctly into the district's database.

Appeals. Students and their families have the right to appeal a suspension or expulsion, as outlined in the district's discipline policies. When the appeal is successful, the incident is subsequently deleted from the database. Therefore, the final counts for the district do not include these incidents. According to the records kept by the Placement and Appeals Department, in 2012–13 there were 149 suspension appeals, 1 of which was successful and deleted from the system.

Findings

The analysis focuses on the following subjects:

- Overall suspension rates
- Suspension rates by race/ethnicity
- Suspension rates by gender
- Suspension rates by grade level
- Suspension rates by reason
- Average length of suspensions
- Suspension rates by students with disabilities status
- In-school suspension rates
- Expulsion rates

Overall out-of-school suspension rates. The 2012–13 district suspension rate (7.4 suspensions per 100 students) dropped from the prior year to the lowest rate in 23 years (see Figure 1). There were 9,622 student suspensions during the 2012–13 school year, down from 10,385 in 2011–12. Multiple suspensions for individual students are included in these totals.

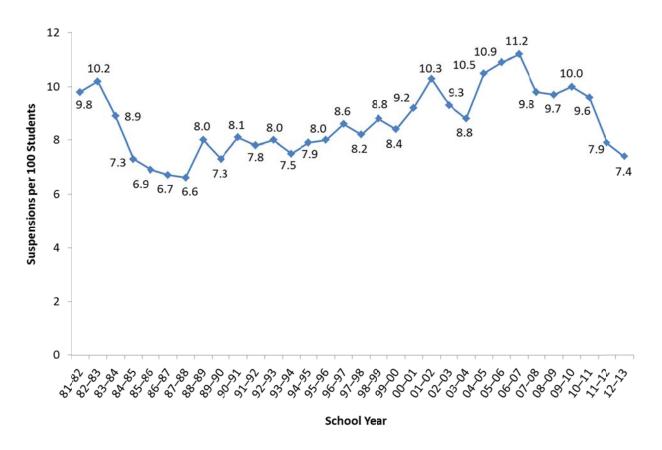

Figure 1. District suspension rates, 1981–82 through 2012–13.

In addition to the decrease in the overall suspension rate, the percentage of students suspended (excluding multiple suspensions per student) also decreased (see Figure 2). The changes in the percentage of students suspended closely parallel the changes in suspension rates.

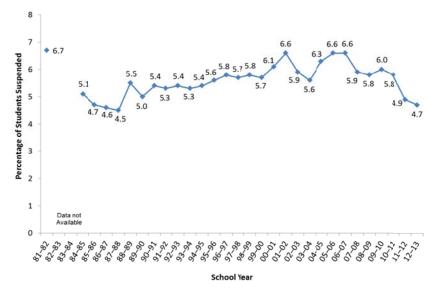

Figure 2. Percentage of district students suspended, 1981–82 to 2012–13.

Suspension rates by racial/ethnic group.⁸ Differences in suspension rates among students of different ethnicities have stayed relatively consistent over time (see Figure 3). Ethnicities with higher suspension rates have stayed in the upper end of the range over the years, while those with lower rates have stayed in the lower end. African American student suspension rates have consistently been at least 50 percent higher than those for all other racial/ethnic groups. Following African American students (in declining order of suspension rates) were Native American, Pacific Islander, and Hispanic students. White and multiracial students have had consistently lower suspension rates over the years, with Indochinese, Filipino, and Asian students maintaining the lowest rates.

Starting in 2009–10, in compliance with new federal guidelines, the district added a new racial category for students who are considered to be multiracial (or multi-ethnic). Students are multiracial when they choose more than one race on their enrollment forms. For example, a student may choose both "White" and "Indochinese" and thus be considered multiracial. However, if "Hispanic" is selected along with another race, then the student is not considered multiracial but solely Hispanic. Students already enrolled in the district prior to 2009–10 were given the opportunity to change their racial category. Therefore, comparisons of racial-ethnic data with years prior to 2009–10 should take these changes into account. In the four years that students with multiple ethnicities have been reported, their rates have been just higher than those for White students.

Figure 3 shows changes in suspension rates for each racial/ethnic group over time. Compared to 2011–12, rates dipped for all students with the exception of Pacific Islander, Indochinese, and African American students. The rate for Asian students dropped by 35 percent (from 1.6 to 1.0), the largest percentage decrease for any racial/ethnic group in 2012–13. Other racial/ethnic groups with large rate decreases included Native American students (by 30 percent), Filipino students (by 29 percent), and multiracial student (by 25 percent).

Certain racial/ethnic groups are over-represented among students suspended, a repeated pattern over the years. While African American students comprised only 10 percent of the population in 2012–13, they represented 25 percent of suspensions. Likewise, Hispanic students represented 46 percent of the student population and 55 percent of suspensions. Conversely, five racial/ethnic groups are under-represented (White, Filipino, Indochinese, Asian, and multiracial students). Reasons for these discrepancies are many and beyond the scope of this report.

Recause of their relatively small numbers in the district, suspension rates for these groups show considerable variability over time.

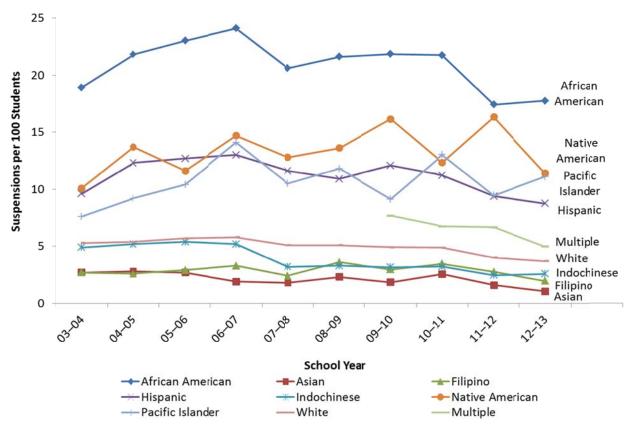

Figure 3. District suspension rates for major racial/ethnic groups, 2003–04 through 2012–13.

In 2012–13, the percentage of suspended students with more than one suspension fell slightly from 29.8 percent to 29.5 percent (see Table 1). The percentage decreased for all racial/ethnic groups except Native American, whose proportions stayed the same. The most dramatic decrease was for Asian students, whose percentage decreased by 43 percent, from 18.0 percent to 10.3 percent, the lowest rate for this group in 19 years. Generally, the portion of suspended students suspended more than once in the school year has been decreasing in the last few years.

| 2012-13 | 29.5 | 22.7 | 32.0 | 35.2 | 10.3 | 13.8 | 29.5 | 24.1 | 30.8 | 27.4 | 23.3 | 30.7 |

[&]quot;-" = Racial/ethnic category was not in use.

This variation in multiple suspensions is reflected in the average number of suspensions per suspended student by racial/ethnic group: 1.73 for African American, 1.65 for multiracial, and 1.58 for Native American and Hispanic students, compared to 1.54 for Indochinese, 1.48 for Pacific Islander, 1.44 for White, 1.18 for Filipino, and 1.13 for Asian students. The districtwide average was 1.59 suspensions per suspended student.

Suspension rates by gender. Figure 4 shows the differences in suspension rates between genders. Overall, males continue to be suspended significantly more often than females. The ratio of male-to-female suspension rates in 2012-13 was about 3:1 (i.e., about 3 male suspensions for every female suspension). Over the last few years, while the absolute gap between males and females has decreased, the ratio of male-to-female suspensions has increased. As revealed in Table 1, males were also more likely to in-

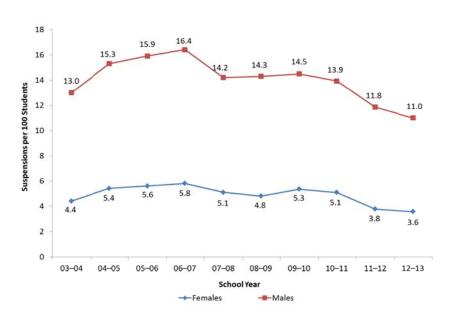

Figure 4. District suspension rates by gender, 2003–04 through 2012–13.

cur multiple suspensions than were females (32.0 percent versus 22.7 percent, respectively).

Filipino, Asian, multiracial, Indochinese, White, and Hispanic students' male-to-female suspension ratios exceeded the district's (meaning that proportionately more males are suspended than females within those racial/ethnic groups compared to the district as a whole), while the ratios for African American and Pacific Islander students were lower (see Table 2).

Because all racial/ethnic groups exhibit gender differences, student group differences are more extreme. For example, the African American male rate of 25.0 suspensions per 100 students was the highest in the district in 2012–13 and far exceeds the 0.3 rate of Asian females, which was the lowest. Male-female differences in suspension rates also vary by grade level. In 2012–13, the highest male-female ratio was in grade K (11.1 male suspensions for every female suspension) and the lowest was in grade 10 (2.2 male suspensions for every female suspension).

Table 2
Suspension Rates by Racial/Ethnic Group and Gender, 2003–04 through 2012–13

Suspension rates by grade level. Grade-level suspension rates vary even more than ethnic or gender rates. In 2012–13, the suspension rate for grade 7 students was over 12 times as high as that for kindergartners (see Figure 5). This pattern is consistent with data from previous years.

For the past 10 years, the suspension rate for grades 6–8 has been five to eight times that of grades K–5 (see Figure 6). Grade K–5 rates have hovered around 3.0 since

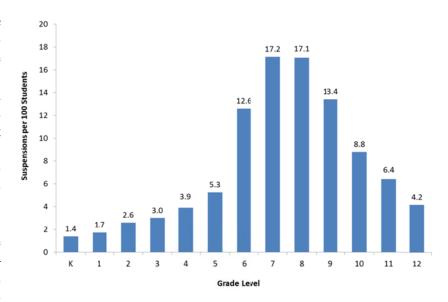

Figure 5. District suspension rates by grade level, 2012–13.

2002–03. Grade 9–12 rates showed more variability over the same time period. Starting in 2002–03, the rate dropped to 11.1 from 12.0, then climbed to the mid-13s for three years, then dropped again to between 9.5 to 11.2 for the next five years, falling to 8.5 in 2012–13. Suspension rates for grades 6–8, while mimicking the pattern for the upper-level grades, witnessed their largest drop in 2011–12 from 21.6 to 16.2, a 25 percent decrease.

[&]quot;-" = Racial/ethnic category was not in use.

Racial/ethnic groups vary in grade-level ratios, as shown in Table 3. The 2012-13 districtwide suspension rate for grade 7-12 students was over two-and-one-half times that for K-6 students. Asian student suspension rates at the secondary level were five times as high as in elementary grades. The lowest ratio was for Native American students, whose rate for secondary students was just 1.4 times as high as that for elementary students.

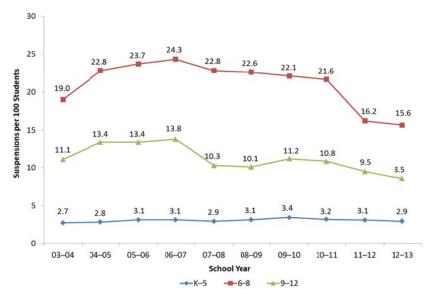

Figure 6. Suspension rates for elementary, middle level, and senior high students, 2003–04 through 2012–13.

[&]quot;-" = Racial/ethnic category was not in use.

The reason for the difference in elementary and secondary suspension rates becomes apparent when suspension rates for individual grade levels are examined. As already mentioned, Figure 5 displays suspension rates for each grade level in 2012–13. The pattern is very clear: relatively low and slowly rising suspension rates through grade 5, then rapidly rising rates in the middle-level grades, peaking in grades 7 and 8, and dropping steadily until grade 12, by which time the suspension rate is below that for grade 5. This pattern has been fairly consistent over the years. Clearly evident is the peak of suspension rates at grades 6–9, corresponding to the early teen years. The decrease after grade 9 may stem from student maturation and the loss of students who drop out.⁹

Table 4 shows the complexity underlying the breakout of district data into elementary and secondary suspension rates. For example, rates by grade level have varied over time. Suspension rates in 2012–13 in grades 4–12 are below corresponding rates for 2003–04. In grades K–3, the rates in 2012–13 are higher than those nine years prior.

Table 4 Suspension Rate by Grade Level, 2003–04 through 2012–13

| Year | K | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
|---------|-----|-----|-----|-----|-----|-----|------|------|------|------|------|------|-----|
| 2003-04 | 0.7 | 1.2 | 2.1 | 2.8 | 4.0 | 5.6 | 12.8 | 20.4 | 24.0 | 16.5 | 12.6 | 8.1 | 5.7 |
| 2004-05 | 0.9 | 1.0 | 1.9 | 2.5 | 4.2 | 6.2 | 15.5 | 25.3 | 28.0 | 20.3 | 15.6 | 9.6 | 5.8 |
| 2005-06 | 1.0 | 1.9 | 1.7 | 2.7 | 4.6 | 6.8 | 17.9 | 25.9 | 27.4 | 21.0 | 14.3 | 10.2 | 6.1 |
| 2006-07 | 0.7 | 1.8 | 2.7 | 3.1 | 4.5 | 5.7 | 17.3 | 26.9 | 28.8 | 21.2 | 15.3 | 9.3 | 5.7 |
| 2007-08 | 1.0 | 1.6 | 2.2 | 2.7 | 3.8 | 6.4 | 16.1 | 25.0 | 27.1 | 16.7 | 11.2 | 6.9 | 3.9 |
| 2008-09 | 0.8 | 2.2 | 2.8 | 3.1 | 4.4 | 5.8 | 16.3 | 25.2 | 26.3 | 17.1 | 10.5 | 6.2 | 4.4 |
| 2009-10 | 1.9 | 2.0 | 2.7 | 3.4 | 5.1 | 5.9 | 14.7 | 25.5 | 26.2 | 18.8 | 12.3 | 7.7 | 4.2 |
| 2010-11 | 1.5 | 2.0 | 2.1 | 3.0 | 4.4 | 6.3 | 13.5 | 24.5 | 26.7 | 16.9 | 12.5 | 7.8 | 4.6 |
| 2011-12 | 1.2 | 1.8 | 2.6 | 2.6 | 4.6 | 5.9 | 12.7 | 18.6 | 17.3 | 15.0 | 10.4 | 7.0 | 4.2 |
| 2012-13 | 1.4 | 1.7 | 2.6 | 3.0 | 3.9 | 5.3 | 12.6 | 17.2 | 17.1 | 13.4 | 8.8 | 6.4 | 4.2 |

⁹ A true comparison is difficult to conduct because dropouts had less time in school in which to be suspended compared to students enrolled the entire year.

Suspension rates by reason.¹⁰ The two most common reasons for suspension remain assault/battery and disruption/defiance.¹¹ Over the past 10 years, these two reasons have accounted for 67.3 percent (a low reached in 2012–13) to 73.7 percent (a high reached in 2004–05) of all suspensions. Figure 7 shows the relative frequency of different categories of suspensions over the past 10 years. Descriptions of these categories are provided in Appendix D. Over the past 10 years, hate incidents and robbery/extortion have remained the least frequent reasons for suspension, comprising 0.7 percent of all suspensions in 2012–13.

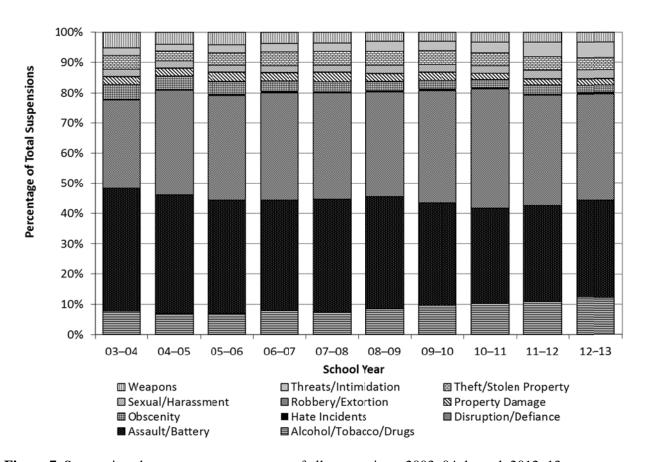

Figure 7. Suspensions by reason as a percentage of all suspensions, 2003–04 through 2012–13.

¹⁰ In 2012–13, district suspensions were reported in 16 basic categories, which are combined here into 11 categories. All alcohol-, drug-, tobacco-, and drug paraphernalia-related offenses are combined into "alcohol/tobacco/drug." Similarly, threats and intimidation and harassment offenses are combined into "threats/intimidation/harassment," shortened to "threats/intimidation." Intimidation was added in 1994–95, hate incidents in 1995–96, and hazing in 2003–04. Because it is a new category with between only 1 to 16 instances occurring in each of the first nine years, hazing is not included in this discussion.

¹¹ Assault/battery includes attempting/threatening to cause and causing physical injury, as well as sexual assault. Disruption/defiance includes disrupting school activities and willfully defying teachers and administrators in the performance of their duties.

Table 5 shows that the rates of suspension for all types of incidents dipped slightly or stayed the same in 2012–13, with the exceptions of alcohol/tobacco/drugs and hate incidents, which rose slightly. The rate for assault/battery dropped to a ten-year low of 2.37.

Table 5Suspension Rates by Reason for Suspension, 2003–04 through 2012–13

| Year | Alcohol/ Tobacco/ Drugs | Assault/ Battery | Disruption/ Defiance | Hate Incidents | Obscenity | Property Damage | Robbery/ Extortion | Sexual Harassmt | Theft/ Stolen Property | Threats/ Intimidtn/ Harassmt | Weapon |

| 2007-08 | 0.73 | 3.64 | 3.43 | 0.04 | 0.33 | 0.29 | 0.02 | 0.22 | 0.44 | 0.27 | 0.35 |
| 2008-09 | 0.82 | 3.60 | 3.37 | 0.04 | 0.30 | 0.25 | 0.01 | 0.25 | 0.45 | 0.32 | 0.29 |
| 2009-10 | 0.97 | 3.40 | 3.75 | 0.06 | 0.27 | 0.27 | 0.01 | 0.25 | 0.46 | 0.31 | 0.29 |
| 2010-11 | 1.00 | 3.01 | 3.80 | 0.05 | 0.25 | 0.20 | 0.01 | 0.24 | 0.42 | 0.34 | 0.31 |
| 2011-12 | 0.87 | 2.50 | 2.89 | 0.03 | 0.24 | 0.15 | 0.01 | 0.22 | 0.35 | 0.39 | 0.26 |
| 2012-13 | 0.92 | 2.37 | 2.60 | 0.04 | 0.17 | 0.15 | 0.00 | 0.22 | 0.30 | 0.38 | 0.24 |

There has been a general upward trend in the suspension rate for threats/intimidation/harassment, from 0.01 in 1995–96, a year after the category was first introduced, to a high in 2011–12 of 0.39. The suspension rate for property damage has shown a general decline since a 10-year high in 2005–06 of 0.32.

Average length of suspension. Suspensions carry penalties that range from one to five days out of school, depending on the severity and frequency of the offense and the discretion of the school staff. For example, the first offense of possession or use of a controlled/prohibited substance carries a penalty ranging from one to three days, whereas the second offense carries a penalty of three to five days, and the third offense carries a penalty of five days, along with a mandatory expulsion recommendation. In 2012–13, students were suspended for a total of 20,161 days, resulting in a monetary loss of approximately \$602,612 for the district.¹²

Over the years, males have averaged slightly longer suspensions than females (see Table 6). This trend was broken for the first time since records have been kept (since 1984–85) in 2009–10 when females had a higher average length of suspension than males. But, those figures reversed again in 2010–11 and continued through 2012–13 with the typical pattern of males with higher average suspension lengths (2.11 days) than females (2.05 days).

Native American students had the shortest average lengths of suspensions in 5 of the last 10 years, Asian students in 3 of the last 10 years, multiracial students in 2 of the last 10 years, and White students in 1 of the last 10 years. Indochinese students had the longest average length of suspension for six years, Filipino students for three years, and Asian, Native American, and Pacific Islander students for one year each. The variability of the average suspension length for Asian and Native American students reflects the small number of these students suspended each

¹² In 2012–13, the ADA (Average Daily Attendance) value for each SDUSD student per day was \$29.89.

year – just 41 suspensions in 2012–13 for Native American students, the lowest count among racial/ethnic groups.

[&]quot;-" = Racial/ethnic category was not in use.

Table 7 shows the strong relationship between grade level and average length of suspension. Suspensions tend to be shortest in the primary grades (grades K–2), averaging 1.67 days in 2012–13, climbing to an average of 1.91 in grades 3–6, and jumping to a 2.20 average in grades 7–12. The difference in highest (grade 10) and lowest (grade K) average suspension length by grade level was less than a day (0.73) in 2012–13. Whether this difference in suspension length between lower- and upper-grade students is a reflection of the seriousness of the offenses committed by the older students, or the leniency of the administration because of the age of the younger students, is unknown.

Table 7Average Length of Suspension in Days by Grade Level, 2003–04 through 2012–13

| Year | K | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |

Students with Disabilities. Of the 9,622 suspensions in 2012-13, 2,586 (26.9 percent) involved students with disabilities (SWD).¹³ The suspension rate for SWD decreased 10 percent from the previous year, while the rate for students in general education decreased by 5 percent. SWD had a suspension rate of 19.0 suspensions per 100 students, over three times the 6.0 rate for students in general education (see Figure 8).

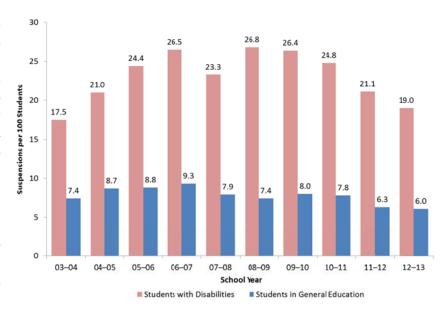

Figure 8. District suspension rates for students with disabilities and students in general education, 2003–04 through 2012–13.

The proportion of SWD suspensions accounted for by

assault/battery (35.3 percent) was slightly higher than that for students in general education (30.9 percent). On the other hand, the proportion of SWD suspensions accounted for by alcohol/tobacco/drugs (8.2 percent) was lower than the corresponding proportion for students in general education (13.9 percent).

As in the district population, male students accounted for a disproportionate number of SWD suspensions—85.1 percent—while making up only 68.6 percent of all SWD. Similarly, African American students, making up 14.5 percent of SWD, accounted for 26.8 percent of SWD suspensions. By contrast, 51.8 percent of SWD were Hispanic, yet they accounted for 48.7 percent of SWD suspensions. Likewise, 21.5 percent of SWD were White, and they received 16.3 percent of SWD suspensions. The remaining students (Asian, Filipino, Indochinese, Native American, and Pacific Islander) together made up 15.2 percent of SWD and received only 5.2 percent of SWD suspensions.

¹³ Students with disabilities (SWD) are those with Individual Education Programs (IEPs).

In-school suspensions. Inschool suspension (ISS) was developed and implemented in the 1970s because of parent and educator concerns that suspended students were missing out on education and getting a "free ticket" out of class. In addition, out-ofschool suspensions been correlated with daytime juvenile crime and dropping out of school.14 An ISS provides an alternative to an out-of-school suspension (which is typically reserved for repeat or high-risk offenders) and imposes sanc-

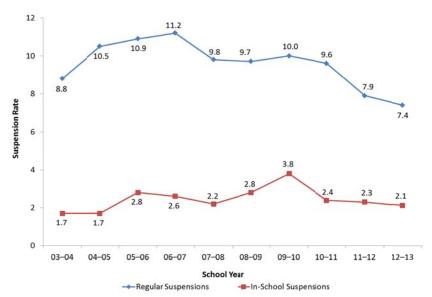

Figure 9. District suspension rates, regular and in-school, 2003–04 through 2012–13.

tions without requiring students to miss instructional days. An ideal ISS includes holding students accountable for school assignments while also enacting some sort of rehabilitation.

The in-school suspension rate dropped from a 10-year high of 3.8 days per 100 students in 2009–10 to 2.4 in 2010–11, followed by two years of a gradual decline through 2012–13 (see Figure 9). In-school suspension rates are computed using the entire district enrollment, including enrollment for schools that do not use in-school suspensions (e.g., ALBA, Home and Hospital Instruction, Mt. Everest) or that have positive attendance reporting (e.g., Garfield and Twain).¹⁵

Similar to the pattern for regular suspensions, in-school suspension rates in 2012–13 peaked in the middle level grades (see Table 8). The rates decreased from the previous year for grades 1 and 6–12 and increased for the rest. The largest decrease was for grade 1, where the rate was 46 percent lower in 2012–13 than in the prior year.

¹⁴ Chobot, R., and Garibaldi, A. (1982). In-School Alternatives to Suspension: A Description of Ten School District Programs. *The Urban Review*, 14(4):317–336.

¹⁵ Schools with positive attendance report attendance data only when a student earns attendance credit, as opposed to assuming attendance if a student is not reported absent.

Table 8In-School Suspension Rates by Grade Level, 2003–04 through 2012–13

Relatively few schools account for the majority of in-school suspensions, and, over the years, the schools with large numbers of in-school suspensions have varied (see Appendix B). The number of schools with 100 or more in-school suspensions has ranged from 3 to 12 in the last 14 years. Two current schools have had over 100 in-school suspensions for 7 of the last 14 years, 1 school for 6 years, and 2 schools for 5 years. These few schools each year have accounted for 28.9 to 68.0 percent of all district in-school suspensions. The single school with the most in-school suspensions—a title held by 8 different schools over the last 14 years—has accounted for anywhere from 7.7 to 25.2 percent annually of all district in-school suspensions. The large differences in in-school suspension rates between schools and within a school over time may be an indication of the diverse and inconsistent practices in assigning this type of consequence from school to school, from year to year, and from administrator to administrator, as well as inconsistencies in documenting this consequence in the district's database.

Gender- and race/ethnicity-based differences in in-school suspension rates (see Table 9) roughly mirror those in regular (out-of-school) suspension rates. Over the last 10 years, the male in-school suspension rate has been 2.2 to 2.8 times that for females, a ratio slightly lower than the 2.7–3.1:1 ratio for regular suspensions. As with regular suspension rates, African American students have had an in-school suspension rate well above (1.5 to over 2.5 times) the district rate. Hispanic students' in-school suspension rate has also consistently been above the district rate, while that for White students has been consistently below. Asian, Filipino, and Indochinese rates have also consistently been well below the district average.

Much of the substantial racial/ethnic rate variation across years can be traced to the abovementioned disproportionate weight of a varying group of just a few schools on total district inschool suspensions. Because the ethnic distributions of these schools differ, district ethnic rates can vary widely over time depending on which schools in a given year have a disproportionate impact on the district rates.

Table 9 In-School Suspension Rates by Racial/Ethnic Group and Gender, 2003–04 through 2012–13

Expulsions. Expulsion from school is the most serious disciplinary consequence, requiring approval from the Board of Education. Expelled students must attend a community day school or alternative education program for up to two semesters. They are also excluded from participating in any district- or school-sponsored activity, including regular classes, performances, dances, and athletics. Students may be expelled because of committing a serious infraction that requires a recommendation for expulsion from the school, such as causing serious injury to another person, assault or battery on a school employee, possessing a weapon, selling a controlled substance, and robbery. Students may also be recommended for expulsion because of a long history of infractions, not necessarily serious ones.

In 2012-13, the district expulsion rate was 0.16 expulsions per 100 students, tied with the prior year for the lowest rate in 17 years (see Figure 10). Appendix C lists the expulsion rates by school for the past five years. Males represented 87.3 percent of the 212 district expulsions. The ratio of male-to-female expulsion rates has typically been 4 or 5 to 1, higher than the typical 3 to 1 for suspension rates, but in 2012-13 males were expelled at a rate 7 times that for females (see Table 10). As with suspensions, African American and

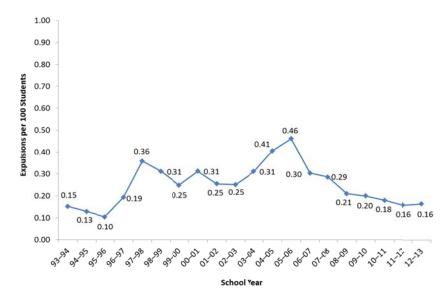

Figure 10. District expulsion rates by year, 1993–94 through 2012–13.

Hispanic students' expulsion rates have usually exceeded the district rate. Asian, Filipino, Indochinese, White, and multiracial students had expulsion rates below the district rate in 2012–13.

[&]quot;-" = Racial/ethnic category was not in use.

The expulsion rate for Native American students was above the district rate in 2012–13, but a trend is difficult to determine due to the small number of students in this racial/ethnic group. Filipino students experienced the largest drop in rate in 2012–13 (from 0.05 to 0.03), while Indochinese students witnessed the highest proportional increase (from 0.08 to 0.12).

[&]quot;-" = Racial/ethnic category was not in use.

Much like suspensions, expulsions peak around the middle level grades (see Figure 11). The highest expulsion rate occurred in grade 8 for 16 of the last 19 years, twice in grade 7, and once in grade 9. During those 19 years, grade 8 students received one-fifth to one-third of the district expulsions each year.

The expulsion rate for SWD (0.32 percent) was 2.3 times higher than that for students in general education (0.14). This is not too surprising,

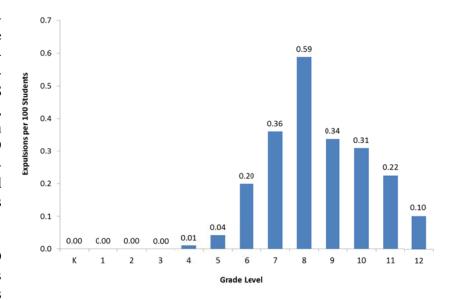

Figure 11. District expulsion rate by grade level, 2012–13.

since the suspension rate for SWD also exceeded that for students in general education. However, it further supports the need for intervention efforts aimed at this group of students.

Discussion

Overall suspension rates. There have been multiple efforts to reduce the number of suspensions in recent years. Programs have been implemented by various district departments, including the Student Services Department, the Counseling and Guidance Department, the Mental Health Resource Center, and the Race/Human Relations and Advocacy Department. Programs are aimed at intervention, prevention, and counseling, including some partnerships with community organizations and social service agencies. These relatively new programs may have positively affected the most recent suspension rate.

Positive Behavioral Interventions and Supports (PBIS), which started in January 2009, included the Response to Instruction and Intervention (RTI²) plan. This is not a packaged program per se but an approach that staff members can use to help develop an effective discipline plan for their school. It is aimed at all students by establishing behavior supports to achieve social, emotional, and academic success. The first schools to participate included six middle schools, two K-8 schools, and seven elementary schools. At a time when the suspension rate for the district as a whole decreased slightly, the combined suspension rate for these schools increased by 11 percent between 2007-08 and 2008-09. By the second year, 31 schools were added, and the combined suspension rate for all participating schools decreased (from 22.4 to 17.1 percent) between 2008– 09 and 2009–10, while the overall district rate increased. In the third year, 20 schools were added (6 small high schools, 2 middle schools, and 12 elementary schools). The rate for all PBIS schools continued to drop during the next three years (13.3 in 2010–11 to 10.3 in 2011–12 to 9.8 in 2012–13), shadowing the district's overall rate decreases. The effects of programs like this often take time to show positive results as staff and students get more involved in the designed methods, which is evidenced from the increase in the suspension rate for the first year. However, the plan seemed to benefit the schools in the following years, possibly due to better training for the new schools after the older schools had participated for an adequate amount of time.

Suspension rates by racial/ethnic group. There are consistently large differences in suspension rates among various racial/ethnic groups. For example, African American students are suspended at rates higher than other students, a situation that is not unique to the San Diego Unified School District. Research studies have failed to provide a definitive explanation for these large differences and why suspension rates are so high for African American students. One possible explanation focuses on the ethnic composition of the administration or teaching staff, but this hypothesis was not supported by a recent study. More likely, as the author suggested, it is better explained by an interaction of multiple factors, in which African American students tend to live in low-income neighborhoods, and schools in these neighborhoods tend to have a difficult time retaining experienced teachers. Inexperienced teachers may have a harder time responding to discipline issues effectively and serving the students' needs academically.

Outside the classroom, these same low-income neighborhoods tend to have higher crime rates, which can also have an effect on the behaviors of students within the school. Despite these convincing arguments, it is nearly impossible to pinpoint the exact reason for these discrepancies without further empirical research.

¹⁶ Arcia, E. (Fall 2007). Variability in Schools' Suspension Rates of Black Students. *Journal of Negro Education*, at http://findarticles.com/p/articles/mi_qa3626/is_200710/ai_n25139931?tag=artBody;col1.

Suspension rates by reason. Not only have suspension rates by reason of suspension varied over time, but so have suspension reason rates by racial/ethnic group, gender, and grade level. Tables 11 to 13 display 2012–13 suspension rates for individual reasons by racial/ethnic group, gender, and grade level, respectively; Figures 12 to 14 show suspensions for individual reason *as a proportion of all suspensions* for each of those groups.

Table 11 shows that African American students had the highest suspension rates in 2012–13 in four categories: assault/battery, disruption/defiance, obscenity, and sexual harassment. The rest of the categories were led by Native American students (robbery/extortion, theft/stolen property, and threats/intimidation/harassment), Pacific Islander students (hate incidents, property damage, and weapon offenses), and Hispanic students (alcohol/tobacco/drugs).

Table 11Suspension Rates by Reason and Racial/Ethnic Group, 2012–13

| Ethnicity | Alcohol/ Tobacco/ Drugs | Assault/ Battery | Disruption/ Defiance | Hate Incidents | Obscenity | Property Damage | Robbery/ Extortion | Sexual Harassmt | Theft/ Stolen Property | Threats/ Intimidtn/ Harassmt | Weapon |

| Filipino | 0.21 | 0.97 | 0.38 | 0.03 | 0.03 | 0.03 | 0.11 | 0.00 | 0.06 | 0.04 | 0.09 |
| Hispanic | 1.30 | 2.52 | 3.15 | 0.04 | 0.21 | 0.20 | 0.30 | 0.00 | 0.24 | 0.47 | 0.31 |
| Indochin. | 0.42 | 0.58 | 1.03 | 0.02 | 0.05 | 0.05 | 0.14 | 0.00 | 0.08 | 0.09 | 0.14 |
| Nat. Am. | 1.11 | 2.50 | 2.78 | 0.00 | 0.28 | 0.00 | 1.11 | 0.00 | 0.56 | 2.22 | 0.83 |
| Pac. Isl. | 1.09 | 3.99 | 2.90 | 0.12 | 0.24 | 0.60 | 0.85 | 0.00 | 0.24 | 0.12 | 0.97 |
| White | 0.54 | 1.24 | 1.09 | 0.03 | 0.09 | 0.07 | 0.16 | 0.00 | 0.13 | 0.23 | 0.11 |
| Multi. | 0.35 | 1.82 | 1.81 | 0.01 | 0.16 | 0.13 | 0.23 | 0.00 | 0.18 | 0.17 | 0.14 |

When offenses by reason for each group are viewed in proportion to all offenses for the group (see Figure 12), certain aspects stand out. Native American students had the highest proportion of robbery/extortion offenses, theft/stolen property offenses, and threats/intimidation offenses. Filipino students had the highest proportion of assault/battery offenses and hate incidents. Pacific Islander students had the highest proportion of property damage offenses and weapon offenses. White and African American students had the highest proportion of sexual harassment offenses, Asian students had the highest proportion of alcohol/tobacco/drug offenses, Indochinese students had the highest proportion of disruption/defiance offenses, and multiracial students had the highest proportion of obscenity offenses.

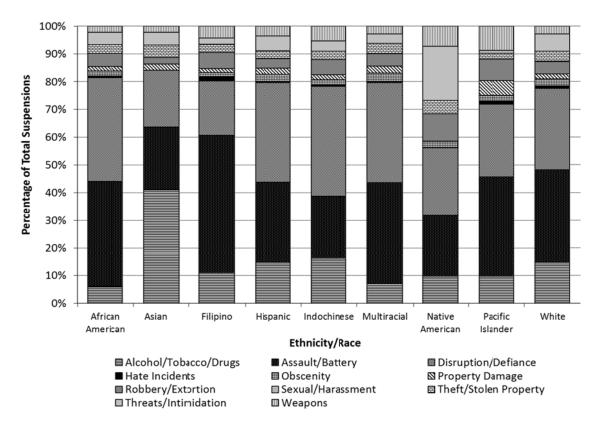

Figure 12. Suspensions by reason as a proportion of all suspensions by racial/ethnic group, 2012–13.

Males were far more likely than females to be suspended for all reasons (see Table 12). The male-to-female ratio in suspension rate by reason ranged from 2.3 to 1 for hate incidents to 6.9 to 1 for weapon offenses.

Table 12Suspension Rates by Reason and Gender, 2012–13

| Gender | Alcohol/ Tobacco/ Drugs | Assault/ Battery | Disruption/ Defiance | Hate Incidents | Obscenity | Property Damage | Robbery/ Extortion | Sexual Harassmt | Theft/ Stolen Property | Threats/ Intimidtn/ Harassmt | Weapons |
|--------|-------------------------------|---------------------|-------------------------|-------------------|-----------|--------------------|-----------------------|--------------------|------------------------------|------------------------------------|---------|
| Female | 0.54 | 1.17 | 1.21 | 0.03 | 0.05 | 0.05 | 0.16 | 0.00 | 0.09 | 0.22 | 0.06 |
| Male | 1.27 | 3.51 | 3.92 | 0.06 | 0.28 | 0.25 | 0.43 | 0.01 | 0.35 | 0.53 | 0.41 |

However, there are sizable variations in the differences between the genders, which are reflected in Figure 13, showing the *proportionate* frequency of suspensions for types of offense for females and males. Noteworthy are the greater degrees to which male suspensions involve disruption/defiance, theft/stolen property, weapons, obscenity, property damage, and sexual harassment, and females' higher involvement in offenses involving assault/battery, alcohol/tobacco/drugs, threats/intimidation, robbery/extortion, and hate incidents.

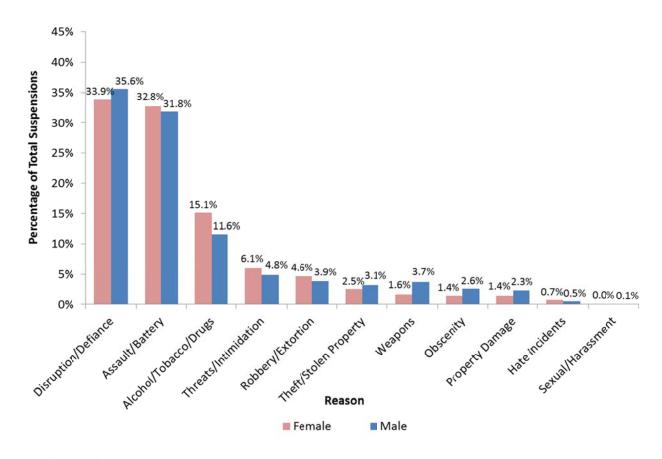

Figure 13. Suspensions by reason as a proportion of all suspensions by gender, 2012–13.

In 2012–13, suspension rates for five types of offenses peaked in grade 8: hate incidents, robbery/extortion, sexual harassment, threats/intimidation, and weapons (see Table 13). Offenses that peaked in grade 7 were assault/battery, disruption/defiance, obscenity, and property damage. In addition, the rates for alcohol/tobacco/drugs peaked in grade 9 and for theft/stolen property peaked in grade 6.

Table 13Suspension Rates by Reason and Grade Level, 2012–13

The increasing relative frequency of alcohol/tobacco/drugs and the decreasing prominence of assault/battery at higher grade levels are quite striking (see Figure 14). The peak relative frequencies of alcohol/tobacco/drug offenses occurred in grade 12, while assault/battery peaked in grade 1. The relative frequencies of weapons rose through the early elementary school years, peaking in grade 5. Similarly, the relative frequencies of sexual harassment rose through the elementary school years, peaked in grade 3, and remained relatively stable from grade 6 until grade 12 where it jumped up slightly.

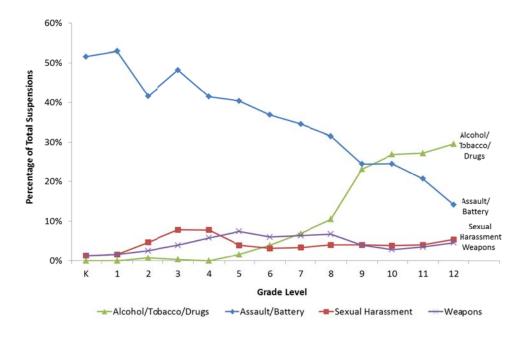

Figure 14. Suspensions by selected reason as a proportion of all suspensions by grade level, 2012–13.

Average suspension lengths. There is a fairly consistent interaction between the suspension rate and the average length of suspension: in 12 of the past 17 years, as the rate dropped, the average length increased, and as the rate rose, the average length decreased. If suspension rates are partly a function of school staff discretion, it seems likely that decreases in regular suspensions would involve dropping suspensions for less severe offenses that carry shorter penalties. The remaining offenses that lead to suspension would have a longer average suspension length. With the explicit goal of reducing suspensions, administrators may well have "ignored" slighter offenses or used in-school suspensions as an alternative disciplinary measure during the years in which the suspension rates decreased.

Students with Disabilities. The district had set a goal of a 10-percent annual reduction in suspension rates for SWD beginning in 2001–02. In 2002–03, the SWD suspension rate fell by 13 percent and in 2003–04 by 25 percent (see Figure 8). By way of comparison, students in general education had an 8 percent reduction in 2002–03 and a 5 percent reduction in 2003–04. However, the rates for both SWD and students in general education increased in each of the next three years, with SWD rates increasing faster than those for students in general education each year. Although the rates for both groups of students dropped in 2007–08 (SWD by 12 percent and students in general education by 15 percent), the rate in 2008–09 for SWD increased by 15 percent while the rate for students in general education decreased by 6 percent. In 2009–10, the pattern switched, with the students in general education rate increasing by 8 percent and the SWD rate decreasing by 1 percent. In the next three years, both rates decreased each year, with the most dramatic decrease occurring in 2011–12 for both groups (a 19 percent drop for students in general education and a 15 percent drop for SWD). It appears that interventions and alternatives to suspensions need to be examined again for SWD.

Homeless, Foster, and Military-Family Students. Additional student groups may need to be targeted for extra services because of their tendency to get suspended. Two of these groups are homeless students and foster students. In 2012-13, homeless students (N=3,597) were suspended at over three times the rate (23.3) of students were who not homeless (6.9; see Figure 15). A much larger gap was seen for foster students (N=617), whose suspension rate (45.9) was over six times that for students who are not foster children (7.2). Students who were both homeless and foster during the same school year (N=71) fared the worst, with a suspension rate (183.1) a staggering 25

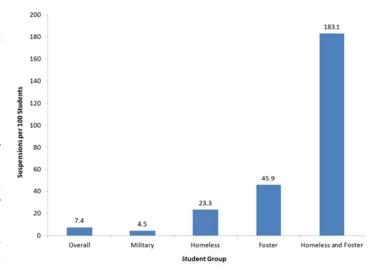

Figure 15. Suspension rates by student homeless, foster, and military status, 2012–13.

times that for students who were not both homeless and foster (7.3).

A group of students who do not seem to need additional services for behavior intervention is students who come from military families (i.e., students who have at least one parent active in the military). In 2012–13, the suspension rate for this group of students (4.5) was lower than that for students who are not from a military family (7.6). This difference might be a function of the student's grade level and the tendency for parents to accurately fill out the military field on the enrollment form as students continue on in school. In the district as a whole, the number of military-family students in 2012–13 peaked at 1,049 in kindergarten and reached its nadir of 289 in grade 12. However, the suspension rate for military-family students was lower than for the rest of the district in all grade levels except for kindergarten, and grades 1 and 12.

Charter Schools. The 2012–13 suspension rate for charter schools (9.0) was slightly higher than the corresponding rate for district-managed schools (7.1). The charter school expulsion rate (0.19) was also slightly higher than that for district-managed schools (0.16). These differences may be explained by a variety of factors.

First, charter schools have become more popular over the years (enrollment increasing in the district from 1.5 percent in 1993–94 to 13.6 percent in 2012–13), and not all students who apply get a spot at their school of choice. Because of their independence and desirability, charter schools may have become stricter than in years past in enforcing school discipline rules. To this end, they may have been better at documenting student behavior to support suspension decisions.

Second, another possible reason for year-to-year suspension rate fluctuations for all schools can also be applied to the differences seen in charter schools: school staff responses to misbehavior may be more or less lenient from year to year. This difference may be amplified at charter schools, where there is more independence and discretion on how to respond to student behavior. Furthermore, since there are fewer charter schools than district-managed schools, a change in staff response at one school could result in a sizable rate change for charter schools as a whole. For example, O'Farrell Charter School had 299 suspensions in 2009-10, which ballooned to 505 suspensions in 2010-11, dropped to 337 in 2011-12, and rose to 395 in 2012-13. During each of these four years, the rest of the charter schools had between 0 and 174 suspensions each. O'Farrell accounted for between 24.2 percent and 33.0 percent of all charter school suspensions in the past four years, making this a dominant school in determining charter school suspension rates as a whole. O'Farrell added ninth grade in 2010-11, which also increased its total school enrollment by about 100. Even factoring in this enrollment increase, O'Farrell's suspensions were disproportionately high, with a rate of 53.4 suspensions per 100 students in 2010–11, compared to 35.3 in 2009–10 (and compared to only about 7 suspensions per 100 students for the rest of the charter schools combined for each year). In 2011–12, O'Farrell's suspension rate dropped to 36.8 suspensions per 100 students, compared to 6.7 for the rest of the charter schools. In 2012–13, O'Farrell's rate dropped just slightly (to 36.4) while the rest of the charters increased slightly (to 7.2).

Despite O'Farrell's high suspension rates in the middle grade levels (grade 6 through 9), overall charter school suspension rates were higher than the respective district-managed rates in grades kindergarten through grade 6 and grade 8. Other charter school grades displayed lower suspension rates than at district-managed schools.

SWD status does not appear to be a factor in the difference between charter and district-managed schools. The suspension rate for SWD at charter schools (16.9) was lower than for SWD at district-managed schools (19.1). However, SWD at district-managed schools may have more extreme disabilities than SWD at charter schools that may lead to behavioral problems, since only particular district-managed schools are staffed to properly handle certain cases of SWD. Ethnicity seemed to have an effect on the suspension rate difference between charter and district-managed schools.

Repeat Offenders. In 2012–13, 12 students (0.01 percent of the student population) were suspended 10 or more times, resulting in 138 total suspensions among them (1.43 percent of the total number of suspensions). These students were suspended at a rate over 100 times that of other students. Half (50 percent) were in grades 7 or 8, all but two (83 percent) were male, almost half (42 percent) were Hispanic, and over half (54 percent) of their suspensions were for disruption/defiance. They were suspended for a total of 312 days, missing an average of over a month of school each, resulting in a loss of over \$9,300 for the district in ADA reimbursement. One of these 12 students was also expelled during the 2012–13 school year. Targeting these students and providing other sorts of interventions and consequences would appear to be beneficial to the students' academic careers as well as for the district's finances.

In-school suspensions. Until 2011–12, in-school suspension data for 2010–11 were drawn from the Zangle database of attendance data files. Starting in 2011–12, in-school suspension information was compiled from the same database as suspension data, mostly due to the fact that state reporting started requiring district in-school suspension data. So, caution must be taken when analyzing in-school suspension rates over time. In prior years, in-school suspension data for positive attendance schools (e.g., Garfield, Twain), which do not allow in-school suspensions data, were not included. Some charter schools do not use the district's attendance database, so their in-school suspensions were not reported, as well. It is also possible that some schools are less diligent in entering in-school suspensions into the attendance database because there is no effect on the schools' attendance data and ADA of not entering such data. As a result, in-school suspensions were probably underreported for the district as a whole until 2011–12.

Expulsions. Expulsions are the end result of offenses that state Education Code and/or district policy deem to be so egregious or threatening to safety and school climate that removal from school is viewed as the proper alternative for the offending student. It appears that enforcement of the district's zero tolerance policy in connection with weapons and repeated fighting, approved by the Board of Education in 1993, led to surges in expulsions. Expulsions increased quite sharply beginning in 1996–97, almost doubling the previous year's rate, which was the decade low, and then almost doubling again in 1997–98, reaching a record high (since record-keeping began in 1993–94) until new peaks were reached in 2004–05 and 2005–06. Since then, the expulsion rate has been on a steady decline. This decline could be attributed to a variety of factors – some positive – that could actually decrease suspendable behaviors, such as schools getting better at informing students and parents about student behavior expectations as well as providing student interventions before behavior gets out of control. A negative factor for the decrease in the expulsion rate does not actually decrease unwanted behaviors. Having fewer staff members at school sites, due to recent budget cuts and layoffs, means fewer adults to witness and report unwanted student behavior.

Recommendations

Reducing the number of student behaviors that lead to being suspended will increase classroom instruction time for students, a benefit both to students and schools. Getting suspended from school can be seen as a reward by some students (in other words, they get free days off from school), so it would be preferable to use consequences other than out-of-school suspensions for their behaviors, including in-school suspension, detention, community service, and restorative justice (i.e., repairing the harm caused by the student's behavior). The district has used these alternative consequences for years, and their use appears to reduce the suspension rate.

In addition, and even more importantly, schools should provide interventions to prevent errant behaviors before they even begin. The district has encouraged school site staff to implement varying levels of interventions, depending on the severity of the infraction. These interventions range from simply changing the student's immediate environment (e.g., changing seats) to addressing specific behaviors that the student needs to work on (e.g., implementing a behavioral intervention plan). Interventions could also be school-wide as opposed to student-specific. Schools can determine certain "hot spots" for negative student behavior and make appropriate changes to the environment to discourage these behaviors, such as providing more supervision in a stairwell where students tended to get in trouble during passing period. To address behavioral issues in highly mobile populations, such as homeless and foster students, schools can be encouraged to assign student "buddies" to new students, someone who will help them navigate the surroundings and culture of their new school. Currently, the district's Youth and Transition Office assigns mentors and case managers for youth in these higher-risk populations who check in and connect with the youth to provide proactive support.

Therefore, it is recommended that the district continue and expand its use of alternative consequences and behavioral interventions to further reduce negative student behavior. It is anticipated that this will continue to reduce the suspension rate, increase the funding schools receive for ADA, and provide the schools with the means to extend these services to future students.

Conclusion

After a three-year increase, the district suspension rate decreased from a 25-year high of 11.2 suspensions per 100 students in 2006–07 to a rate of 9.8 in 2007–08 and again to 9.7 in 2008–09. Unfortunately, these recent drops were followed by an increase in 2009–10 to 10.0 suspensions per 100 students, but the rate continued its gradual decline in the next three years. The causes of any change may be multiple and difficult to determine from year to year. It is speculated that the suspension rate decreased in 2012–13 partly because of a trend by schools to use alternative disciplinary actions. Gender and race/ethnicity of students continue to play a role in the suspension rates and lengths of out-of-school suspensions. Racial/ethnic and gender gaps have not been reduced and remain a challenge for the district in the future.

Report prepared by Mara E. Bernd, Research and Reporting Department

Elementary School Student Suspension Rates by School, 2008–09 through 2012–13

Appendix D: Definitions

| Reason for Suspension | Description (per SDCS Administrative Procedure No. 6290) | Combined Suspension Reason |
|---|---|----------------------------------|
| Alcohol/Intoxicants/Controlled Substances | Unlawfully possessed, used, sold, furnished, or under the influence of any controlled substance, an alcoholic beverage, or an intoxicant. | Alcohol/Tobacco/Drugs* |
| Assault/Battery/Mutual Combat | Caused, attempted to cause, or threatened to cause physical injury to another person (including school employees), except in self-defense; also included are attempted sexual assault, sexual assault, and sexual battery. | Assault/Battery |
| Disruption/Defiance | Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, school officials, or other school personnel engaged in the performance of their duties. | Disruption/Defiance |
| Drug Paraphernalia | Possessed, offered, arranged, or negotiated to sell any drug paraphernalia. | Alcohol/Tobacco/Drugs* |
| Harassment | Intentionally engaged in harassment, threats, or intimidation, directed against school district personnel or pupils, that is sufficiently severe or pervasive to have the actual and reasonably expected effect of materially disrupting class work, creating substantial disorder and invading the rights of either school personnel or pupils by creating an intimidating or hostile educational environment. | Threats/Intimidation/Harassment* |
| Hate Violence | Caused, threatened to cause, attempted to cause, or participated in acts of hate against persons or property. | Hate Incidents |
| Hazing | Engaged in, or attempted to engage in, hazing. | Hazing |
| Obscenity | Committed an obscene act or engaged in habitual profanity or vulgarity. | Obscenity |
| Property Damage | Caused or attempted to cause damage to school property or private property. | Property Damage |
| Property Theft | Stole or attempted to steal school property or private property, or received stolen property. | Theft/Stolen Property |
| Robbery/Extortion | Committed or attempted to commit robbery or extortion. | Robbery/Extortion |
| Sexual Harassment | Made unwelcome sexual advances, requests for sexual favors, or other verbal, visual, or physical conduct of a sexual nature sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational enviornment. | Sexual Harassment |
| Substance in Lieu of Alcohol/Intoxicants/Controlled Substance | Unlawfully offered, arranged, or negotiated to sell any controlled substance, an alcoholic beverage, or an intoxicant of any kind, and either sold, delivered, or otherwise furnished to any person another liquid, substance, or material and represented the liquid, substance, or material as a controlled substance, alcoholic beverage, or intoxicant. | Alcohol/Tobacco/Drugs* |
| Threats and Intimidation | Harassed, intimidated, or threatened a pupil who is a complaining witness or a witness in a disciplinary proceeding for the purpose of either preventing that pupil from being a witness or retaliating against that pupil for being a witness, or both; made terrorist threats against school officials or school property, or both. | Threats/Intimidation/Harassment* |
| Tobacco or Nicotine Products | Possessed or used tobacco or any product containing tobacco or nicotine, including but not limited to cigarettes, smokeless tobacco, snuff, chew packets, and betel (except by a pupil of his or her own prescription products). A fourth offense requires an expulsion referral. | Alcohol/Tobacco/Drugs* |
| Weapons | Possessed, sold, or otherwise furnished any firearm, replica firearm, knife, explosive, or other dangerous object, or used any object in a threatening manner. | Weapons |
